# 10 FACTS ABOUT CAPXON

## A WORLD OF ELECTROLYTIC CAPACITORS

CapXon's know-how in Electrolytic Capacitors covers technologies with aluminum foil. These are Aluminum Electrolytics, Solid Conductive Polymers and the combination known as Hybrid Conductive Polymers:

Aluminum Electrolytic	Description	Features
	<p>Rated Voltage • <math>V_R</math></p> <p>Cathode Material</p> <p>Self-healing of Dielectric</p> <p>Package</p> <p>Stability</p> <p>Lifetime</p> <p>Reliability</p>	<p>4 VDC to 650 VDC</p> <p>Liquid Electrolyte</p> <p>Yes</p> <p>Widest range in all sizes</p> <p>Reduced performance at low temperature</p> <p>Limited life at high temperature</p> <p>Automotive  AEC-Q200 qualified</p>

## CERTIFICATION ACCORDING TO INTERNATIONAL STANDARDS

Quality, the environment, safety, and conservation of resources are the focus of our daily added value.

To meet the high requirements in the electronics industry, CapXon, as a global company, is certified according to the highest international standards. In this way, we ensure that all procedures and processes in our company are always structured and continuously optimized based on the valid and defined requirements.

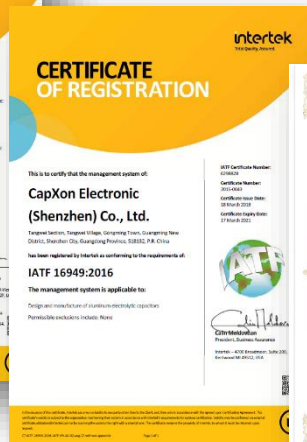

CapXon is certified according to the following standards:

ISO 9001

ISO 14001

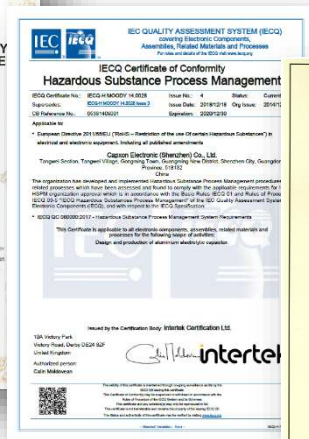

IATF 16949

ISO 50001

OHSAS 18001

OC 080000

China RoHS

ISO/IEC 17025

### SMART PRODUCTION

Since 1980 CapXon focuses on research, development and manufacturing of Aluminum Electrolytic Capacitors and is a leading brand with its own capacitor production in Shenzhen and Shanxi as well as its own foil production in Yichang, Qinghai, Baotou and Shanxi. More than 40 years of experience give us a deep understanding of foil material, high performance electrolytes, advance lead wire technology, conductive polymer and electrochemical systems.

Precision equipment ensures the quality of key components

Capacitor production for all core technologies as Aluminium Electrolytic, Solid Conductive and Hybrid Conductive Polymer capacitors with R&D and Quality headquarters in Shenzhen

Development of our own production process and machinery with the highest grade of automated production equipment and software

### ADVANCED TECHNOLOGY

Only with the best production equipment and well-trained staff is it possible to maintain and expand the market position. Every year CapXon invests very large sums in machine, software and the education for our more than 2500 employees. To recognize deviation immediately during the production process, CapXon uses various precise inspection equipment.

All productions are qualified with strict specifications and every operation is monitored and measured at the machine

The products and the production meet the requirements of all industries even Medical or Automotive

Automated and full controlled manufacturing process

**NEW RESEARCH**

Highly roughened and formed anode foils are the heart of every Aluminum Electrolytic Capacitor. CapXon has been conducting intensive research and development for decades to bring low-voltage and high-voltage films into new spheres and at the same time to optimize processability and durability. The electrolytes and conductive polymers used on the cathode side are subject to a continuous improvement process, taking commercial and technical aspects into account.

Electrolyte and polymer development to achieve maximum product reliability and a long life

High grade etching foil, high grade forming foil through consistent further development to the limit of what is technically feasible

Well-equipped ISO/IEC 17025: 2005 accredited laboratories for research, analysis and testing

## COMPONENT RELIABILITY DATA

In this section, the main parameters for predictive reliability and availability calculations are explained and in which way CapXon can provide you with such data.

### FAILURE RATE $\lambda$

The failure rate  $\lambda$  describes the frequency which components possibly fail. The failure rate describes how many defects can be expected, if you run the application in operation for a certain time.

The failure rate can be calculated as following:

$$(1) \quad \lambda = \frac{n}{N \cdot t}$$

- n ... Number of defect components
- N ... Number of tested components
- t ... Amount of operating hours

### FAILURE CRITERIA

Capacitors will show certain wear-out phenomenon's by aging and so as times goes by the capacitors can possibly change their electrical performance.

**As soon as the component is no longer fulfilling their electrical spec, stated features or with customer agreed parameters, the status of capacitor is seen as in failure mode or defect. This does not necessarily mean that the application will fail. An essential influence are the design and dimensioning by customer, which lead to major impact on possible failure modes and fail criteria for the application itself.**

All given data by CapXon is just concerning the failure mode cases of the single component and is not representing the complexity of complete applications, assembled systems nor full electronic PCB boards.

### BATHTUB CURVE

It's a widely used model within the reliability engineering to describe the expected failure rates over the whole application lifetime / product life cycle.

$\lambda$  - Failure Rate

#### Bathtub curve

**The Bathtub Curve states the failure rate behaviour within the three different product life cycle stages. These are the Early Failure Period, the Useful Life Period and the Wear Out Period.**

With production control, monitoring and quality assurance, it is possible to reduce the early failures to a best possible minimum.

Failures within the Useful Life Period, which are described as FIT or MTBF value, are defined as events of coincidence and are not representing any systematic or epidemic failures.

### FIT – FAILURES IN TIME

FIT - Failures In Time is the common way to describe the expected failure rate for electronics.

**The FIT values describe certain failure rate within the useful life period and provides the basis for calculations, assumptions and extrapolation of reliability and availability to gather the understanding for expected failures / defects. These calculated figures are used to decide whether the component is a proper choice for the desired use case. Additionally, it need to be clarified whether redundancies are necessary and which redundancies are needed to fulfil the desired mission profile of an application.**

The unit FIT defines the expected amount of failures per application hour.

$$(2) \quad 1 \text{ FIT} = \frac{10^{-9}}{h} = \frac{10^{-9} \text{ failures}}{\text{per operating hour}}$$

So as higher the stated FIT value is, as higher the statistical chance of defect is.

Please find the following example of a failure rate test determined by a useful life test:

- Number of failures  $n = 2$
- Number of tested components  $N = 10\ 000$
- Operating hours  $t = 20\ 000\ h$

$$(3) \quad \lambda = \frac{n}{N \cdot t} = \frac{2}{10\ 000 \cdot 20\ 000\ h} = 10\ FIT$$

$$(4) \quad 10\ FIT = \frac{10^{-8}}{h} = \frac{0.001\%}{1\ 000\ h}$$

## MTBF - MEANTIME BETWEEN FAILURES

It's the predicted elapsed time between inherent failures of an electronic system during normal operation. The MTBF can be calculated as arithmetic mean / average time between failures of a system.

Assuming a constant failure rate, the MTBF can be easily calculated by reciprocal value of the Failure Rate  $\lambda$ :

$$(5) \quad MTBF = \frac{1}{\lambda}$$

MTBF is just a different way to describe the failure rate and can be easily converted to FIT and vice versa:

$$(6) \quad MTBF = \frac{10^9\ h}{FIT} = \frac{114\ 000\ years}{FIT}$$

$$(7) \quad FIT = \frac{10^9\ h}{MTBF} = \frac{114\ 000\ years}{MTBF}$$

The **MTBF** values are just covering the useful life period (flat middle section) of the bathtub curve. Because of this, a FIT or MTBF value can't be extrapolated to estimate the service lifetime for a component. FIT or MTBF values doesn't cover the higher failure rates of the wear-out period, where the expected failure rate would be higher due to occurring wear-out phenomenon's.

## LIFETIME TESTS

Due to the fact that all electrolytic capacitors show aging behaviour and a possible drift of electrical parameters over usage time, lifetime tests are performed by manufacturers to describe the related reliability and performance of a certain capacitor. Different product series as well as the single product itself can provide very different lifetime performance. So, these test results are given to select the proper product in relation to the applied stress profile of application to gain the desired application performance within the whole product life cycle.

**There are various names (e.g. Endurance, Load Life, Useful Life, Operational Life, Life Expectancy, Shelf Life, ...) and different lifetime tests that are existing within the industry. Please kindly check the specific test specification and given data for the capacitor before design-in.**

Sadly, there is no standardized naming and test criteria existing, given by any international accepted standard committee for all the lifetime tests, which are applied to electrolytic capacitors. Customers need to compare competitor products carefully with each other to see if test specifications are similar or different.

Please see particular datasheets for the specific test results and criteria of an individual product of CapXon.

Again, please note that the criteria of failure are given by the test specification limits of the dedicated lifetime test and as soon as a component is not fulfilling these given limits, it is rated as a failure. So, failure does not necessarily mean defect or breakdown of application. It is just describing that the drift of electrical performance is bigger than the checked limits of the particular test. It doesn't matter whether the measured C value is lower as the allowed test limit or the component is in a failure mode of open circuit, both cases are treated the same as a failure. Design and dimensioning of application will arrange how much drift of electrical parameters can be accepted for the individual capacitor. For example, when the rate of capacitance change is becoming critical within the application is defined by customer design. The lifetime tests are in place to provide a common and industry-wide comparable performance index of the capacitors.

**As manufacturer, we can state and check how fast a drift of capacitance and further parameters will happen. Dimensioning within application design will set how long an error-free operation is possible. A proper dimensioning can enlarge the acceptable drift and so the lifetime performance. But be aware, if it is not done properly or component is overstressed, it also can shorten the expected lifetime performance. Please be aware to check dimensioning and drift estimation to assure your product performance for the desired lifetime.** For support with lifetime estimations and dimensioning, we are pleased to support you and feel free to get in touch with our technical support.

In the following section CapXon's lifetime tests, which are performed with our products, are described in detail.

## ENDURANCE

The Endurance test of the product checks the performance of its electrical parameters, such as capacitance change, leakage current and dissipation factor on their behaviour over time at a predetermined test setup of electrical stress and ambient condition.

Depending on the product series, the Endurance test is performed according to one of the settings below:

### Setting 1 - applying Endurance test:

- max. Temperature
- $V_R$  - Rated Voltage

### Setting 2 - applying Endurance test:

- max. Temperature
- $V_R$  - Rated Voltage
- $I_R$  - Rated Ripple

Setting 1 is in accordance to the IEC 60364-4 / JIS 51001-4 test criteria and Setting 2 is enlarging the electrical stress setup with additional appli-ance of  $I_R$ , to get a more representative result in comparison to possible real-life applica-tion stress.

The Endurance test is performed within product qualifica-tion at the stage of internal product validation and is re-peated periodically for product requalification.

## USEFUL LIFE

To get more representative understanding of lifetime per-formance for typical capacitor use, the useful life test rep-resents such criteria.

The applied electrical stress is like the Endurance test - Set-ting 2. The test specification limits are wider as the endur-ance test specification, but as described the applied elec-trical stress stays similar. So, a larger acceptable drift of electrical parameters results in a larger expected lifetime. This represents the operational frame which is set by cus-tomer at dimensioning the capacitor specification for their application and the possible borders of an error-free oper-ation.

Also, we state a FIT value related to the useful life test. These failure rate describes the deviation / possibility of occurrence of failures within the useful life period when the settings of useful life test are applied. This is related to the middle section of the bathtub curve the so-called use-ful life period (see above page 12 - Bathtub Curve of Prod-uct Reliability).

In the datasheet you will find the following phrase:

Failure Rate (during useful Life): 0.01%/1000h with a con-fidence level of 60%. As a result, this is like a 100 FIT:

$$\lambda = \frac{0.01\%}{1000h} = 100 \text{ FIT} = 100 \text{ failures} * 10^{-9h}$$

### Example:

If you have 8 000 components running in applications for 5 000 hours with the test conditions applied like the useful life test, you can estimate the number of components that show a higher drift as given by the useful life test spec bor-ders as follows:

- Number of components  $N = 8\ 000$
- Operating hours  $t = 5\ 000\ h$

$$\lambda = \frac{n}{N * t}$$

$$n = \lambda * N * t = \frac{0.01\%}{1\ 000h} * 8\ 000 * 5\ 000h = 4$$

This means that when there are 8 000 pcs in operation for 5 000 hours at the maximum possible operating conditions (max. temp.,  $V_R$  &  $I_R$  similar to useful life test criteria) an amount of 4 products (with a confidence level of 60%) can be expected to show a higher drift as given in the test spec.

## SHELF LIFE

The shelf life test simulates the aging of the capacitor, if it is just stressed with ambient temperature without any electrical load. The shelf life is not defining the possible storage time of the capacitor but just to describe the ag-ing situation before mounting / PCB assembly.

The Shelf Life test criteria shall be satisfied, if the capacitor was restored to 20°C and following a conditioning by volt-age treatment in accordance with 4.1 of JIS 5101-4 was ap-plied, before measuring the capacitor.

**LIFETIME TEST EXAMPLES**

**Example 1** - Useful Life, Endurance (Setting 1) and Shelf life tests of SMD types – HV Series:

Lifetime Test		
Endurance 105°C (V <sub>a</sub> applied)	Test	2000 hours
	ΔC/C	≤ ±30% of initial measured value
	tanδ	≤ 300% of initial specified value
	I <sub>leak</sub>	≤ the initial specified value
Shelf Life 105°C (None)	Test	1000 hours
	ΔC/C	≤ ±30% of initial measured value
	tanδ	≤ 300% of initial specified value
	I <sub>leak</sub>	≤ the initial specified value
Resistance to Soldering Heat	The capacitors shall be kept on a hot plate maintained at 250°C for 30 seconds. After removing from the hot plate and restored at room temperature, they meet the characteristic requirements listed below	
	ΔC/C	Within ±10% of initial value
	tanδ	Less than specified value
	I <sub>leak</sub>	Less than specified value

**Example 2** - of Useful Life, Endurance (Setting 2) and Shelf life tests of Radial types – GF Series

Lifetime Test			
Endurance 105°C (V <sub>a</sub> & I <sub>a</sub> applied)	Test	2000 hours	ø D 5 ~ 6.3 mm
		3000 hours	ø D 8 mm
		5000 hours	ø D ≥ 10 mm
	ΔC/C	≤ ±20% of initial measured value	
	tanδ	≤ 200% of initial specified value	
Shelf Life 105°C (None)	Test	1000 hours	
		ΔC/C ≤ ±20% of initial measured value	
		tanδ ≤ 200% of initial specified value	
		I <sub>leak</sub> ≤ the initial specified value	

**Example 3** - of Useful Life, Endurance (Setting 2) and Shelf life tests of Snap In types – HU Series:

Lifetime Test		V <sub>a</sub> ≤ 100V		V <sub>a</sub> > 100V	
		Test		Test	
Useful Life 105°C (V <sub>a</sub> & I <sub>a</sub> applied)	Test	5000 hours		8000 hours	
	ΔC/C	≤ ±30% of initial measured value		≤ ±20% of initial measured value	
	tanδ	≤ 300% of initial specified value		≤ 200% of initial specified value	
	I <sub>leak</sub>	≤ the initial specified value		≤ the initial specified value	
Endurance 105°C (V <sub>a</sub> applied)	Test	3000 hours			
	ΔC/C	≤ ±15% of initial measured value		≤ ±10% of initial measured value	
	tanδ	≤ 130% of initial specified value		≤ 130% of initial specified value	
	I <sub>leak</sub>	≤ the initial specified value		≤ the initial specified value	
Shelf Life 105°C (None)	Test	1000 hours			
	ΔC/C	≤ ±15% of initial measured value		≤ ±10% of initial measured value	
	tanδ	≤ 130% of initial specified value		≤ 130% of initial specified value	
	I <sub>leak</sub>	≤ the initial specified value		≤ the initial specified value	

**Example 4** - Useful Life, Endurance (Setting 2) and Shelf life tests of Screw types – RK Series:

Lifetime Test		
Useful Life 105°C (V <sub>a</sub> & I <sub>a</sub> applied)	Test	4000 hours
	ΔC/C	≤ ±45% of initial measured value
	tanδ	≤ 300% of initial specified value
	I <sub>leak</sub>	≤ the initial specified value
Endurance 105°C (V <sub>a</sub> applied)	Test	2000 hours
	ΔC/C	≤ ±15% of initial measured value
	tanδ	≤ 130% of initial specified value
	I <sub>leak</sub>	≤ the initial specified value
Shelf Life 105°C (None)	Test	1000 hours
	ΔC/C	≤ ±15% of initial measured value
	tanδ	≤ 130% of initial specified value
	I <sub>leak</sub>	≤ the initial specified value

**TELCORDIA SR-332**

This industry-wide accepted standard provides data and tools for reliability predictions of components, devices or full hardware units of electronic equipment. Telcordia (for-

merly Bellcore). With the given figures and data, it is possible to assure system availability and to gather the desired system reliability.

**FIT & MTBF DATA OF CAPXON PRODUCTS**

CapXon provides FIT & MTBF values based on Telcordia SR332 standard for all components. From our perspective, it provides more reliable prediction because it is more specific and detailed than MIL-217 or Siemens SN 29500.

Please find the FIT values for CapXon components and application-based reliability prediction calculations on the following page.

The table of SMD / RADIAL / Snap-In is covering all Electrolytic Technologies – Liquid, Solid and Hybrid Electrolytic Capacitors in SMD & Radial.

The table of Screw capacitors is just concerning Liquid Aluminum Electrolytic Capacitors.

Table 2: FIT values for Screw types

$\lambda$  - Mean Component Failure Rate

$\sigma$  - Standard Deviation of Component Failure Rate

## CALCULATION OF FIT VALUE FOR APPLICATION CASE

By using the given Telcordia SR-332 figures and by the assumption that the failure rate follows a gamma distribution, the FIT value can be calculated with given mean  $\lambda$  and standard deviation  $\sigma$  (see section tables in section 8.8) and desired UCL - Upper Confidence Level as follows:

$$\text{shape } \kappa = \left( \frac{\lambda}{\sigma} \right)^2$$

$$\text{scale } \theta = \frac{\sigma^2}{\lambda}$$

The desired FIT value for the application case is the P% quantile of the gamma distribution and it can be calculated by the inverse cumulative gamma distribution with the shape  $\kappa$  and scale  $\theta$  parameters as follows:

$$\lambda_{P\%UCL} = G^{-1}(P/100; \kappa; \theta)$$

If the shape  $\kappa$  parameter is >100 the FIT can also be calculated by using the P% quantile of the normal distribution, by inverse cumulative distribution of normal distribution with mean  $\lambda$  and standard deviation  $\sigma$ :

$$\lambda_{P\%UCL} = N^{-1}(P/100; \lambda; \sigma)$$

Customer need to define which UCL is desired for the reliability prediction for their application case (typical values for UCL are e.g. 60%,90%, 95%, 99%).

## CALCULATION EXAMPLE

### Example 1:

GF Series – Radial type  
Aluminum Electrolytic Capacitor

@ 70°C and 75% electrical stress  
Upper Confidence Level (UCL) = 90%

Values according to table 1 at page 16:

$\lambda = 3.89$  FIT /  $\sigma = 0.91$  FIT

$$\text{shape } \kappa = \left( \frac{3.89}{0.91} \right)^2 = 18.27$$

$$\text{scale } \theta = \frac{0.91^2}{3.89} = 0.21$$

$$\lambda_{90\%UCL} = G^{-1}(90/100; 18.27; 0.21) = 5.02 \text{ FIT}$$

In Microsoft Excel you can solve this with the following formula:

International / American Excel Version:  
=GAMMAINV(0.9,18.27,0.21)

European Excel Version:  
=GAMMAINV(0,9;18,27;0,21)

### Example 2:

RG Series - Screw type  
Aluminum Electrolytic Capacitor

@ 60°C and 75% electrical stress  
Upper Confidence Level (UCL) = 90%

Values according to table 2 at page 16:

$\lambda = 74.57$  FIT /  $\sigma = 53,27$  FIT

$$\text{shape } \kappa = \left( \frac{74.57}{53.27} \right)^2 = 2.01$$

$$\text{scale } \theta = \frac{0.91^2}{3.89} = 38.05 \text{ FIT}$$

$$\lambda_{90\%UCL} = G^{-1}(90/100; 2.01; 38.05) = 148.57 \text{ FIT}$$

In Microsoft Excel you can solve this with the following formula:

International / American Excel Version:  
=GAMMAINV(0.9,2.01,38.05)

European Excel Version:  
=GAMMAINV(0,9;2,01;38,05)

## QUALITY MANAGEMENT SYSTEM

We are committed and living the principle of **QUALITY FIRST - to offer highly satisfying products and service to the customer**. This global aim is shared by the CapXon quality and environmental management system and part of our business philosophy:

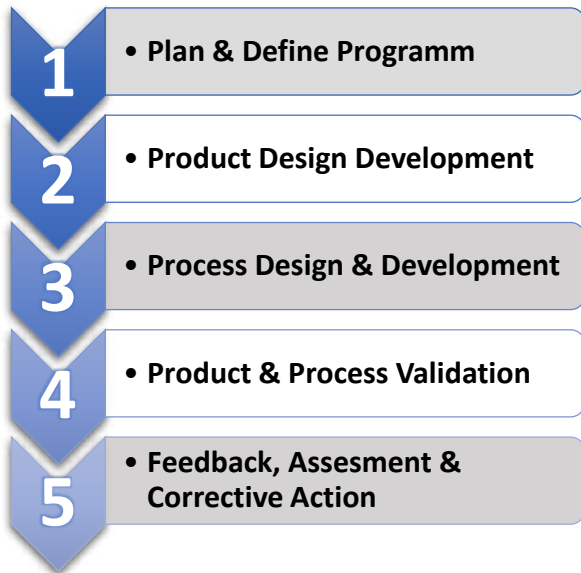

## QUALITY MANAGEMENT SYSTEM CERTIFICATION

In accordance with our quality commitment, CapXon quality management is certified by **ISO 9001** and **IATF 16949**. The certification covers our production plants as well as our sales organization. This standard is applied throughout the company and is used to implement, monitor and to proceed the CapXon quality policy in all process steps.

## PRODUCT AND PROCESS QUALITY

Our product and process development follows the sequence and phases of **APQP – Advance Product Quality Planning**:

### 5 Phases of APQP

Quality tools such quality tools, including **5S, PDCA, FMEA, (DFMEA & PFMEA), MSA, APQP, PPAP, SPC** and others, are in place to minimize risks, provide constant monitoring and ensure continuous improvements in conjunction with regular internal audits and QM reviews.

## QUALITY ASSURANCE

For our sample checks, we refer to **AQL - Acceptable Quality Level** figures, which are based on a random sampling

plan in accordance with **MIL-STD-1916**. Referring to instructions of this standard, a delivered lot will be accepted with a probability of 90%, if the percentage of non-conformance does not exceed the stated AQL figure. As a general internal target, the percentage of non-conformance in deliveries from CapXon is significantly below the AQL figure. The acceptance value we apply to non-conform components is  $c=0$ .

## INCOMING GOODS INSPECTION BY CUSTOMER

We recommend applying planned random sampling checks in accordance with MIL-STD-1916, is compliant with MIL STD 105 D and IEC 60410, for incoming goods inspection. The test methods, which shall be applied, are laid down in the relevant standards.

## ENVIRONMENTAL MANAGEMENT

### Environmental Policy

CapXon defines internally the following environmental protection principles:

- comply with the given law & regulations
- observe and act to reduce pollution
- produce cleanly
- reduce the consumption and save resources
- cut down usage of toxic substances
- make continuous improvements
- protect the environment

## ENVIRONMENTAL MANAGEMENT SYSTEM CERTIFICATION

CapXon environmental management system is certified in accordance with ISO 14001 and is applied throughout the whole company as well as CapXon's environmental policy is implemented.

## ENVIRONMENTAL HAZARDOUS SUBSTANCES FREE MANAGEMENT SYSTEM

To show our commitment to protect the environment and people, CapXon drives a sustainable effort to produce environment-friendly products.

IECQ QC 080000 HSPM - Hazardous Substance Process Management, which is based on the quality management system of ISO 9001.

The CapXon QC080000 based HSF management system is company-wide applied for implementing the CapXon environmental Hazardous Substances management and that CapXon products effectively in the management of hazardous substances.

## ENERGY MANAGEMENT SYSTEM

CapXon establishes comprehensive energy use management in accordance with the requirements of ISO 50001 Energy Management System in order to meet the social responsibility of low carbon environmental protection and efficiency

## CERTIFICATION IN ACCORDANCE TO ISO 14001, ISO 50001, QC 080000

The CapXon Group operates an environmental management system that conforms to the requirements of **ISO 14001** and is mandatory for all plants. The CapXon Group operates an Energy management system that conforms to the requirements of **ISO 50001** and is mandatory for all plants. The CapXon Group operates an environmental **Hazardous Substances Free management system** that conforms to the requirements of QC 080000 and is mandatory for all plants. The company certificate is posted on the CapXon internet: ([www.capxongroup.com](http://www.capxongroup.com)).

## RoHS COMPLIANCE

The abbreviation **RoHS** is usually called **Restriction of Hazardous Substances**, the full term is the short term for the **Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment** and is referring to the EU directive 2011/65/EU. The RoHS 2 – 2011/65/Eu substituted the former RoHS 1- 2002/95/EC.

The aim of RoHS is to banish Hazardous Substances of electronic waste, which can harm the environment and others. Based on this regulation, we as component manufacturer, need to design, observe and control that such hazardous materials are fully avoided and reduced to the max. Moreover, it's possible to replace them by adequate non concerned materials within the given limitations .

For all by RoHS scoped materials (excluding exempt products) the maximum permitted concentrations are:

**all concerned materials** (except Cd)

- 0,1% / 1000ppm

**Cadmium -Cd:**

- 0,01% or 100ppm

These limitations for the restricted materials focus on each homogeneous material within the product. So, the limitations are concerning each individual / single substance or part, which can be separated mechanically (e.g. aluminum can, rubber sealant) and are not apply to the weight of the whole component itself.

Last update of RoHS was Directive (EU) 2015/863, which was published on 2015-03-31 and implemented by 2019-07-22. According to this directive, the following ten substances are restricted:

- **Pb** - Lead
- **Hg**- Mercury
- **Cd** - Cadmium
- **Cr<sup>+6</sup>** - Hexavalent chromium
- **PBB** - Polybrominated biphenyls
- **PBDE** - Polybrominated diphenyl ether
- **DEHP** - Bis (2-ethylhexyl) phthalate
- **BBP** - Butyl benzyl phthalate
- **DBP** - Dibutyl phthalate
- **DIBP** - Diisobutyl phthalate

By the update DEHP, BBP, DBP and DIBP were added to the list of hazardous substances.

Since 2011 RoHS compliance is mandatory to be able to get CE approval.

## C-RoHS / CHINA RoHS COMPLIANCE

The common speech so called China RoHS means the conformance to **SJ/T 11363-2006** for electrical components and assemblies and is fully called **Administrative Measure on the Control of Pollution Caused by Electronic Information Products**.

In China RoHS, the following substances are banned because they are considered as environmentally hazardous:

- **Pb** - Lead
- **Hg**- Mercury
- **Cd** - Cadmium
- **Cr<sup>+6</sup>** - Hexavalent chromium
- **PBB** - Polybrominated biphenyls
- **PBDE** - Polybrominated diphenyl ether

Since December 2012, CapXon has provided China RoHS certification for our products and certifications.

## SONY GP CERTIFICATION

Since Nov 2011, CapXon has been certified as Green Partner by SONY and we are running an environmental management system that continuously meet the requirements of the SONY Green Partner Program and we are working in

accordance with the Sony environmental quality assurance. The Certificate is listed by **SONY GP Certificate No.: FC012746**

## REACH CERTIFICATION

REACH is the abbreviation for Registration, Evaluation, Authorization of Chemicals and by Regulation (EC) No 1907 /2006 it is

So each manufacturer or importer, who is shipping goods to the European Union, need to declare and be compliant according to REACH, if within the shipped goods a substance, which is listed out SVHC-List (Substances of Very High Concern) is included and overall a total mass of bigger a ton per year is imported.

CapXon is working in accordance with REACH requirements and certification is available for our products.

## ROHS & REACH MARKING

Within our datasheets, we mark the RoHS and REACH compliance with our "RoHS & REACH compliant"- marking, please see marking below for reference:

## HALOGEN FREE (HF)

The Halogen Free requirements are based on customer and environmental regulations on management and control requirements of halogens, such as the **European Directive 2002/95/EC, IEC 61249-2-21, Montreal Protocol on Substances that Deplete the Ozone Layer and Controls the Stockholm joint pledge about durable organic pollutant.**

Concerned by the halogen-free initiative are elements like:

- **Fluorine**
- **Chlorine**
- **Bromine**
- **Iodine**
- **Astatine**

In case of fire, these elements can release toxic fumes, which could harm humans and can also cause corrosion of metals.

CapXon is using halogen-free materials for all our electrolytic capacitors. Since 31<sup>st</sup> of Oct 2009 all products meet the halogen-free requirements.

## BANNED AND ENVIRONMENTAL HAZARDOUS SUBSTANCES IN COMPONENTS

As a manufacturer of passive components, we develop our products focussing on sustainability. In order to guarantee a standardized procedure within CapXon, a mandatory avoidance list of Environmental Hazardous Substances with special interest is part of our environmental management system. The planning and development instructions include regulations and guidelines that aim to identify environmental aspects and to optimize products as well as processes with respect to material usage and environmental compliance to design them with sparing use of resources and to substitute hazardous substances as far as possible.

The environmental officer provides support in the assessment of the environmental impacts of our development projects and as part of our environmental management these aspects are checked and recorded in internal design reviews.

## AEC-Q200 & AUTOMOTIVE REQUIREMENTS

To serve the high standards of automotive applications, CapXon provides AEC-Q200 versions for many of their product series.

If AEC-Q200 version is available, the product series or single component is marked with the following marking on the datasheet:

Marking of components with references in reliability testing to AEC-Q200

The AEC-Q200 versions are different in case of reliability testing, production monitoring and available material declaration. For details, please see the table below:

	Standard Version	AEC-Q200 Version
<b>Reliability Testing</b>		
Tests according to internal specification	✓	✓
Tests according to AEC-Q200 applied test range related to product	✗	✓
<b>Production Monitoring</b>		
Production & documentation in accordance with ISO 9001	✓	✓
Production & documentation in accordance with IATF 16949	✗	✓
<b>Compliance and Declarations</b>		
RoHS & REACH compliance	✓	✓
IMDS entry available (on request)	✗	✓
PPAP (on request)	✗	✓

Table 9: Differences between standard and AEC-Q200 components

### AEC-Q200

The AEC-Q200 was issued as a global reliability test standard by the AEC - Automotive Electronics Council. The overall aim of this standard is to define the minimum stress test driven qualification requirements and references of test conditions for qualification of passive components.

AEC-Q200 qualified components are highly qualified products for critical surroundings and can withstand the harsh and challenging usage conditions of an automotive environment.

For Aluminum Electrolytic Capacitors, concerning all technologies of Liquid Aluminum Electrolytic, Solid and hybrid types, the AEC-Q200 claims a test plan of 27 different reliability tests (e.g.: Temperature Cycling, Vibration, Biased Humidity, Surge Voltage, ...) with a sample size of about 77 pcs. and a maximum test duration of particular test of about 1000 hours.

By AEC-Q200 at least the temperature range of -40°C to 105°C need to be tested and applicable for Aluminum Electrolytic Capacitors, if not, differently specified by datasheet.

In case of AEC-Q200 version, reliability testing is performed for the dedicated components in addition to CapXon's internal qualification setup as well as additional agreed requirements between CapXon and their customers.

### PPAP

PPAP – Production Part Approval Process is a documentation to assure quality of supplier and their production process within the automotive supply chain.

The PPAP covers and ensure the following aspects:

- Manufacturability and meeting all given quality requirements
- Design records and specification requirements
- Manufacturing process can consistently meet all component requirements

For our AEC-Q200 components, we provide PPAP Level 3 on request, which is providing product samples as well as the complete supporting data.

### IMDS

The IMDS – International Material Database System contains information about the used materials within the build-up of the component.

With IMDS, it is possible to monitor and control hazardous substances and prohibited substances down to the single component. IMDS is mainly used to fulfil various reporting requirements of automotive manufacturers.

For all our AEC-Q200 components and in case of an automotive use case, we provide IMDS entries on request. For further information, visit our website <http://www.capxongroup.com/en/> or contact CapXon directly.

LIFETIME ESTIMATION • LIFETIME COMPENDIUM

The accurate estimation of the lifetime of components is one of the elementary considerations of any electronic assembly. If electrolytic capacitors are not properly designed for the application environment and load, they will inevitably lead to a disproportionate change in their electrical performance or, in the worst case, failure of the capacitor. CapXon's lifetime compendium helps users to calculate and estimate the expected lifetime of Aluminum Electrolytic Capacitors.

The lifetime compendium is available to download from our website http://www.capxongroup.com/files/Lifetime%20Compendium\_EN.pdf

Content

Table of contents for the CAPXON Lifetime Compendium, listing sections like General Information, Lifetime Estimation, and Component Reliability Data with page numbers.

Technical Background

Technical Background section including diagrams of capacitor heat dissipation, equations for power loss and temperature rise, and descriptions of measurement methods.

Calculation base

Calculation base section containing formulas for ripple current influence, temperature rise, and tables for capacitor series and application voltage influence.

Application example

Application example section showing a circuit diagram for a switching mode power supply, calculation steps for ripple current and temperature rise, and a requirement profile table.

Graphical estimation

Graphical estimation section featuring a graph of ripple current ratio vs. ambient temperature, showing the intersection of application curves with the 40,000h and 100,000h lifetime lines.

## TECHNICAL NOTES • TECHNICAL COMPENDIUM

Due to their compact design, **Aluminum Electrolytic Capacitors** are the most common high-capacitance storage and filter elements in electronics. Like all electronic components, they do not have an “ideal” electrical behavior, they have losses. Their properties are very dependent on temperature and frequency. Detailed knowledge of these components is an absolute must for all electronics developers, especially for power supplies and converters.

The CapXon Technical Compendium describes the basics, electrical parameters, production steps, provides suggestions for the selection of suitable capacitors and design rules for reliable and long-lasting operation.

The technical compendium is available to download from our website [http://www.capxongroup.com/files/Technical%20Compendium\\_EN.pdf](http://www.capxongroup.com/files/Technical%20Compendium_EN.pdf)

### Basics

**TECHNICAL INFORMATION**

**1. BASICS**

Aluminum Electrolytic Capacitors are by far the most important and common high-capacitance storage or filter capacitors in electronic devices.

The enormous importance of electrolytic capacitors is related to their properties:

- Extremely high CV (capacitance per volume) values on the smallest volume
- High dielectric strength of even the thinnest layers (2 to a 10<sup>7</sup> V/cm)
- Relatively high dielectric constant ε (expansion of regions A)
- Etching ability of aluminum, which allows a surface enlargement of up to 200 times and thus a dramatic space reduction
- Very wide range of design and dimensions

**1.1. BASIC STRUCTURE OF A CAPACITOR**

When voltage is applied between both conducting electrode plates, a certain amount of charge Q will be stored in the dielectric surface by a proportional relative voltage. The proportional constant is designating the ability of the capacitor to store energy in electric field.

The capacitance can be calculated using the amount of charge and the applied voltage

$$C = \frac{Q}{U}$$

**1.2. CONSTRUCTION OF ALUMINUM ELECTROLYTIC CAPACITORS**

All Aluminum Electrolytic Capacitors are based on the knowledge that an oxide layer, which is electrochemically produced on aluminum, allows current to pass in one direction and blocks the current in the other direction, like the principle of a semiconductor diode. Even very thin layers enable very high dielectric strength. The oxide layer thus forms the dielectric of the capacitor.

The oxide layer has a porous structure, even before it is processed in order to achieve an optimal electrical connection of this rough surface, a conductive liquid, the electrolyte, is used. The liquid penetrates the pores and wets the coarse layer. The electrolyte is in turn contacted electrically via a second aluminum foil (current supply foil).

**WITH**

- C Capacitance [F]
- Q Charge [C]
- U Applied voltage [V]

$$C = \epsilon_0 \cdot \epsilon_r \cdot \frac{A}{d}$$

**WITH**

- ε<sub>0</sub> Absolutely Permittivity (8.85 · 10<sup>-12</sup> F/m)
- ε<sub>r</sub> Relative Permittivity [F/m] – depending on used dielectric material
- A Surface of capacitor electrode [m<sup>2</sup>]
- d Distance between the capacitor plates [m]

**Fig. 1:** Basic structure of a plate capacitor  
The capacitance can be calculated using the amount of charge and the applied voltage

**Fig. 2:** Sectional view of an aluminum electrolytic capacitor

CapXon\_Ver\_006 - 01/04/2024 9 Main Product Catalogue

### Production steps

**TECHNICAL INFORMATION**

**2. PRODUCTION STEPS**

To achieve the highest level of reliability for all our products, CapXon only uses 99.99% pure aluminum in its electrolytic capacitors. Foreign atoms on the surface in connection with the electrolyte would lead to corrosion.

Raw material Aluminum foil

**Raw material Aluminum foil**

**Foil etching**

The surface of the aluminum foil is enlarged by 50 to 200 times by etching. At CapXon, this is done in its own factories using appropriate continuous baths. The etching process, especially of high-quality high-voltage foils, requires enormous know-how and decades of experience. The electrolyte thin foils (20 – 200µm) have to be mechanically stable enough to survive the further manufacturing steps like multiple etching, weaving, drying, chemical rinsing without damage. Only a high understanding of the complex processing of etched aluminum foils are the guarantee for an aluminum electrolytic capacitor of the highest quality!

**Foil forming**

The oxide layer required as a dielectric is produced electrochemically on the oxide foil after the roughening process (etching) by immersing the foil in a bath with boric acid or similar chemical and applying voltage during the process. The process is called forming. Over time, the layer thickness increases, while the current decreases and the roughness of the oxide layer increases. At first very strongly then increasingly a maximum value. Depending on the bath composition, rated voltages of 650V or higher can be achieved.

**Cutting**

**Contacting and winding**

**Impregnation**

**Assembling**

**Rubber sealing (uvf)**

**Sleeve and marking**

**Aging**

**Finishing and packaging**

Aluminum electrolytic capacitor

**Fig. 3:** Production steps - from foil to capacitor

The processing of the foils, the so-called etching process, the forming and the subsequent manufacture of the electrolytic capacitor with cutting, winding, contacting, impregnating, assembling, aging and final tests take place entirely in our own production facilities under the strictest environmental and cleanliness standards.

Electrolytic capacitors are extremely sensitive to halogens, of which chlorine is the most common. It is therefore warned against the use of halogen-containing agents for removing flux residues on printed circuit boards, as this could result in halogenes on the electrolytic capacitors.

**Fig. 4:** Direct link between forming voltage, oxide layer thickness and specific capacitance

As can be seen from the curve above, the capacitance is inversely proportional to the forming voltage.

CapXon\_Ver\_001 - 02/01/2020 11 Main Product Catalogue

## Electrical parameters

**TECHNICAL INFORMATION**

Apart from the ultra low ESR already explained, what are the main advantages of conductive polymer capacitors?

Technology	Solid Conductive Polymer	Hybrid Conductive Polymer
Capacitance	0.22 ~ 220µF	1 ~ 1500µF
Rated voltage	2.5 ~ 300VDC	16 ~ 400VDC
Max. temperature	100 ~ 125°C	100 ~ 150°C
ESR	7 ~ 25mΩ	1 ~ 20mΩ

**Table 17:** Allow ranges of solid electrolytic and hybrid polymer capacitors

**4.3. STABILITY OF ELECTRICAL PARAMETERS**

If we compare the solid polymer or hybrid polymer technology with other capacitors designs, the advantage becomes clear:

The capacitance of ceramic capacitors reduces for high capacitance types with the applied voltages, what has to do with the following facts:

- Ceramic materials like X7R, X7E, Y4T or Z5U are ferroelectric materials and classified as class 2 ceramics. As higher the applied voltage is lower the permittivity, i.e. lower the capacitance value. The capacitance measured as applied at higher voltage may drop to 50% of the value measured with the standardized measurement voltage of 0.5 or 1.0V, what that means for the circuit in filters or memory applications need not be further elaborated here. This is the reason for harmonic distortions in audio applications.

**Fig. 23:** Change in capacitance as a function of the applied voltage for an X7R class 2 polymer capacitor

CapXon\_Ver\_006 - 01/04/2024 22 Main Product Catalogue

## Capacitor selection

**TECHNICAL INFORMATION**

**6.2. HIGH FREQUENCY OUTPUT SMOOTHING**

In the output stage on the secondary side, a rectification and smoothing circuit converts the AC voltage supplied by the full-bridge MOSFET into the desired DC voltage. For example, 2.2VDC. The smoothing circuit can consist of capacitors or the combination of capacitor and inductor. See Fig. 56. The output current smooth ripples in the rectified voltage and also ensure the stability during transient increase in the load current.

**Fig. 27:** Output smoothing capacitors in a Flyback SMPS

When the MOSFET is not turned on, no current flows through the secondary diode and the output capacitors must supply the load with power. When the MOSFET is turned off, the diode conducts, supplies the load and charges the output capacitor too.

Technology	Type	Normal	Low ESR	High CV	120°C	150°C	160°C
Aluminum Electrolytic	SMC	RM	RL	RM	SL	SL	-
Conductive Polymer	SMC	FD	FL	FL	PL	PL	-
Hybrid	SMC	PS	PL	PL	PL	PL	PL
Electrolytic	SMC	-	AL	AL	AL	AL	AL
Electrolytic	SMC	-	AS	AS	AT	AT	AT

**Table 20:** Recommended capacitor series for output smoothing

**6.3. BUFFERING**

The block diagram in Fig. 38 shows a microcontroller (µC) that is supplied by a linear voltage regulator, whose output voltage is 5V. In the application we assume a steadily under load operation with minimal power consumption and an operating mode of the µC. As standby current (I<sub>standby</sub>) and an operating current between 50mA and 500mA are necessary for the µC. The threshold value between standby and operating current is therefore 50mA, which leads to a standby current requirement of the µC of at least times of 1000mA on the linear regulator.

**Fig. 38:** Standby of power supply circuit

These rise times are too fast for the connected voltage regulator, so that the control loop does not yet react and there is a voltage drop ΔU at the input of the µC. The result would be an unstable operation of the µC, misoperation of binary values or, in the worst case, a system crash.

CapXon\_Ver\_001 - 02/01/2020 27 Main Product Catalogue

## Design rules

**TECHNICAL INFORMATION**

**7. DESIGN RULES**

**7.1. ARRANGEMENT**

Never arrange electrolytic capacitors near hot components such as heaters, transformers, power semiconductors etc. to avoid thermal heating of the liquid electrolyte.

**7.3. CLEARANCE / OVERPRESSURE VENT**

During operation, current flows through the capacitor and the ohmic losses, converted to ESR, create conduction in the form of heat.

The hydrogen released inside the electrolytic capacitor increases the internal pressure. If the internal pressure is too high, the overpressure vent opens and the gas escapes in a controlled manner.

In order not to impair the functioning of the vent, a minimum distance to other components must be maintained above.

No conducting tracks, wires or other circuit parts may be arranged above the valve.

**Fig. 37:** Minimum distance to be observed for the safe operation of the capacitor

**7.2. CONDUCTOR TRACKS**

Make conductor tracks sufficiently thick. Especially at high IFRMS currents the track can be very hot. If the proximity effect is ignored, large widths at 25µm down to 25µm (100µm, 200µm thickness or more).

Power	Track thickness
Very low	35µm
> 25W	100µm
> 200W	200µm

**Table 31:** Recommended track thickness for high IFRMS current

No other conductor tracks may run under the electrolytic capacitor and the minimum distance to the housing should be 2mm or more.

Case diameter Ø	Clearance distance CI
4mm to 16mm	Min. 2mm
16mm to 35mm	Min. 3mm
> 40mm	Min. 5mm

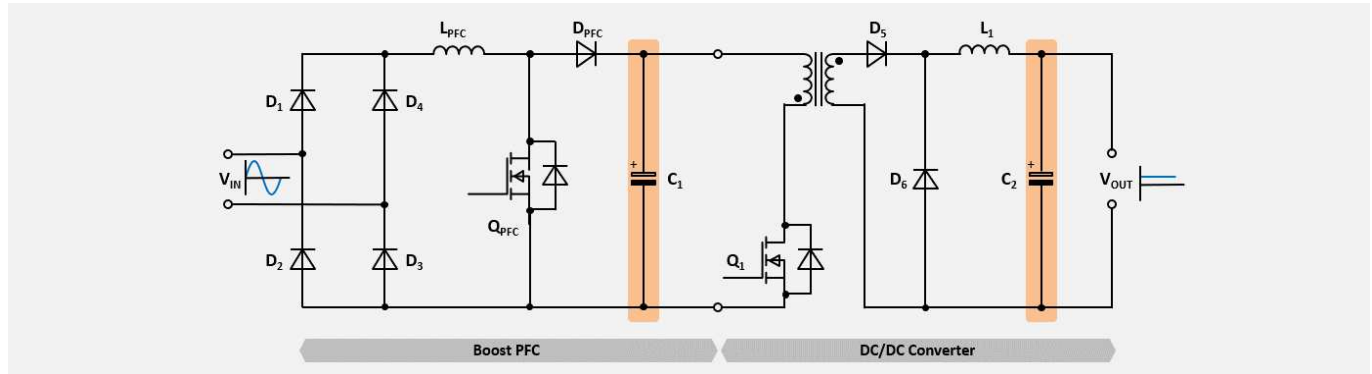

**Table 32:** Recommended minimum clearance distance between topology capacitor and device case

CapXon\_Ver\_001 - 02/01/2020 31 Main Product Catalogue

## SWITCH MODE POWER SUPPLY (SMPS)

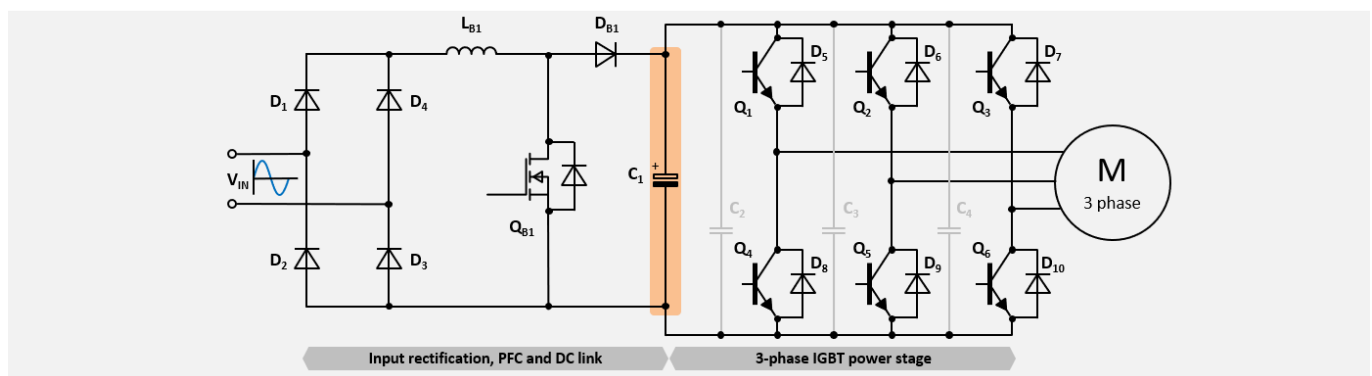

Example of a Switch Mode Power Supply with boost Power Factor Correction (PFC) and downstream DC/DC converter in Fly-back topology with recommended products.

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub>	Boost PFC	Inductor ripple current filtering	100µF; 400V; 105°C; Radial; 2000h D18xL31.5mm; 0.53A@120Hz	KM	KM101M400K315A
C <sub>1</sub>	Boost PFC	Inductor ripple current filtering	470µF; 450V; 105°C; Snap-In ; 5000h D35xL45mm; 1.94A@120Hz	HP	HP471M450P450A
C <sub>2</sub>	DC/DC Converter	Output filtering	470µF; 25V; 105°C; SMD; 2000h D10xL10.5mm; 0.65A@100kHz	DV	DV471M025G105A
C <sub>2</sub>	DC/DC Converter	Output filtering	1000µF; 25V; 105°C; Radial; 10000h D13xL20mm; 1.91A@100kHz	FH	FH102M025I200A
C <sub>2</sub>	DC/DC Converter	Output filtering	82µF; 25V; 105°C; Radial; 2000h D8xL11.5mm; 4.1A@100kHz	PS	PS820M025F115A

## INDUSTRIAL MOTOR DRIVE

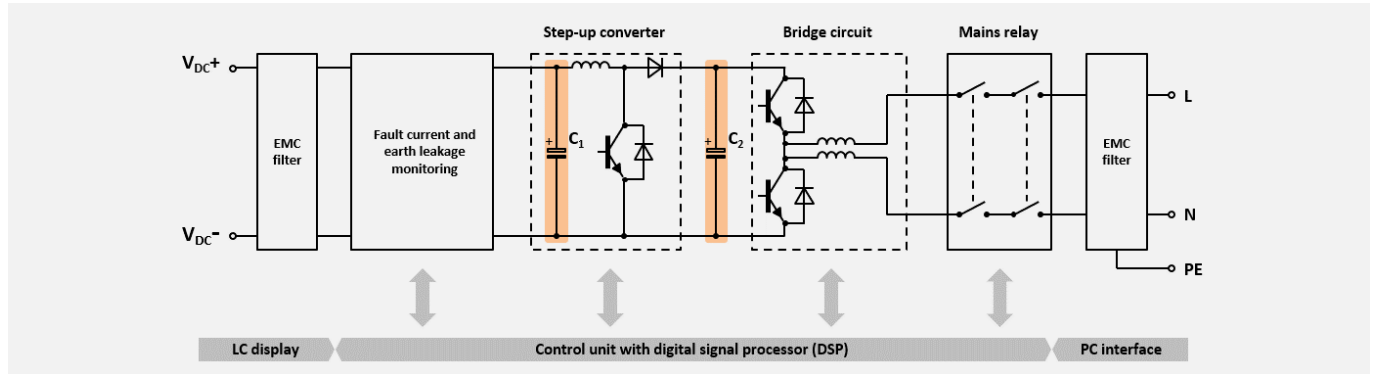

Example of a typical industrial motor drive for pumps, fans or compressors. The power circuit consist input rectifier, Power Factor Correction (PFC), DC link bank and 3-phase IGBT power stage. CapXon offers the full range of DC link solutions in electrolyte technology

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub>	DC link bank	Energy storage and supply	560µF; 450V; 85°C; Snap-In; 7000h D30xL50mm; 3.17A@120Hz	UC	UC561M450O500A
C <sub>1</sub>	DC link bank	Energy storage and supply	470µF; 500V; 85°C; Snap-In; 10000h D35xL55mm; 2.99A@120Hz	UD	UD471M500P550A
C <sub>1</sub>	DC link bank	Energy storage and supply	680µF; 450V; 105°C; Snap-In; 8000h D35xL60mm; 2.94A@120Hz	UK	UK681M450P600A
C <sub>1</sub>	DC link bank	Energy storage and supply	680µF; 450V; 105°C; Snap-In; 10000h D35xL55mm; 3A@120Hz	UL	UL821M450Q550A

## PHOTO VOLTAIC INVERTER

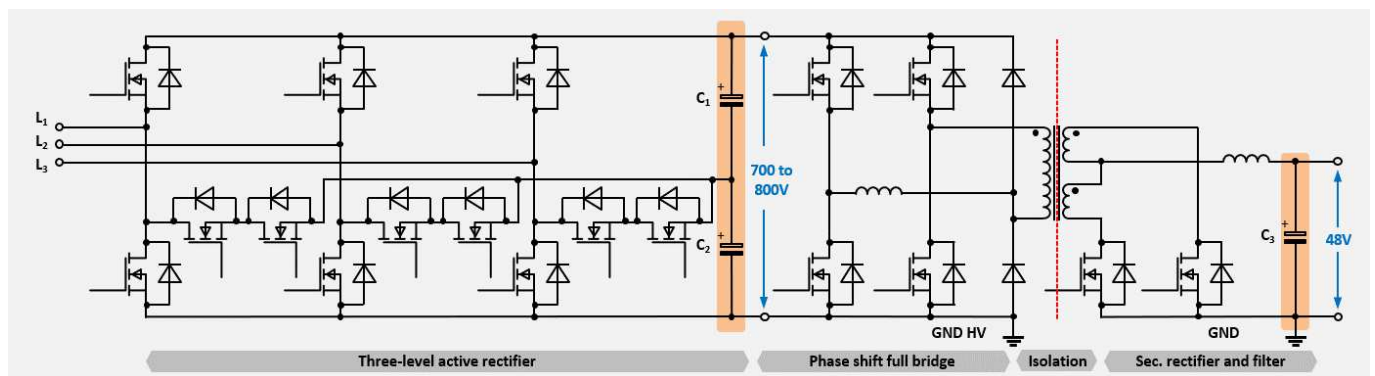

Block diagram of the power circuit of a photo voltaic inverter with EMC filter, monitoring circuit, step-up converter, bridge circuit, and mains relay with recommended products.

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub> , C <sub>2</sub>	Step-up + DC link	Energy storage and supply	680μF; 500V; 105°C; Snap-In; 5000h D40xL60mm; 3A@120Hz	UJ	UJ681M500Q600A
C <sub>1</sub> , C <sub>2</sub>	Step-up + DC link	Energy storage and supply	5600μF; 450V; 105°C; Screw; 20000h D63.5xL165mm; 21.7@120Hz	RX	RX562M450SA65A
C <sub>1</sub> , C <sub>2</sub>	Step-up + DC link	Energy storage and supply	470μF; 450V; 105°C; Snap-In; 10000h D30xL50mm; 1.97A@120Hz	UL	UL471M450O500A
C <sub>1</sub> , C <sub>2</sub>	Step-up + DC link	Energy storage and supply	1000μF; 450V; 105°C; Screw; 8000h D51xL80mm; 4.6A@120Hz	RH	RH102M350R800A

## 3-PHASE HIGH VOLTAGE BATTERY CHARGER

Principal circuit of a 3-phase high voltage battery charger for bidirectional applications such as electric vehicle charging (e-cars, fork-lift trucks, transport vehicles with recommend products for the active rectifier and output filter.

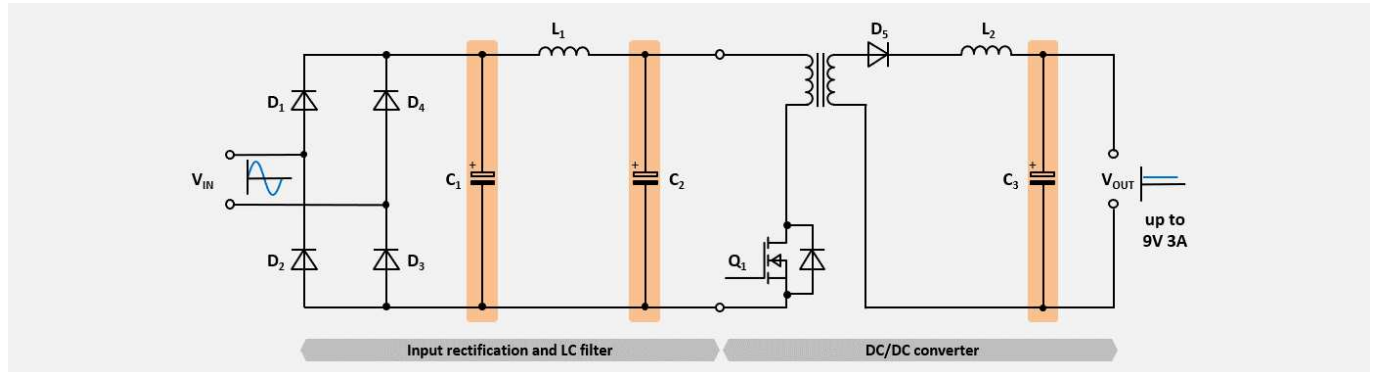

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub> , C <sub>2</sub>	Three-level active rectifier	Energy storage and supply	2200μF; 450V; 85°C; Snap-In; 7000h D45xL90mm; 8.5A@120Hz	UC	UC222M450V900A
C <sub>1</sub> , C <sub>2</sub>	Three-level active rectifier	Energy storage and supply	1000μF; 500V; 105°C; Snap-In; 5000h D40xL80mm; 4.68A@120Hz	UJ	UJ102M500Q800A
C <sub>3</sub>	Output filter	Output buffering and ensure stability	56μF; 63V; 105°C; Radial; 10000h D10xL12.5mm; 2.4A@100kHz	AS	AS560M063G125PTA
C <sub>3</sub>	Output filter	Output buffering and ensure stability	150μF; 63V; 105°C; Radial; 2000h D10xL18mm; 3A@100kHz	PH	PH151M063G125PTA

## 27W PORTABLE POWER USB-C ADAPTER

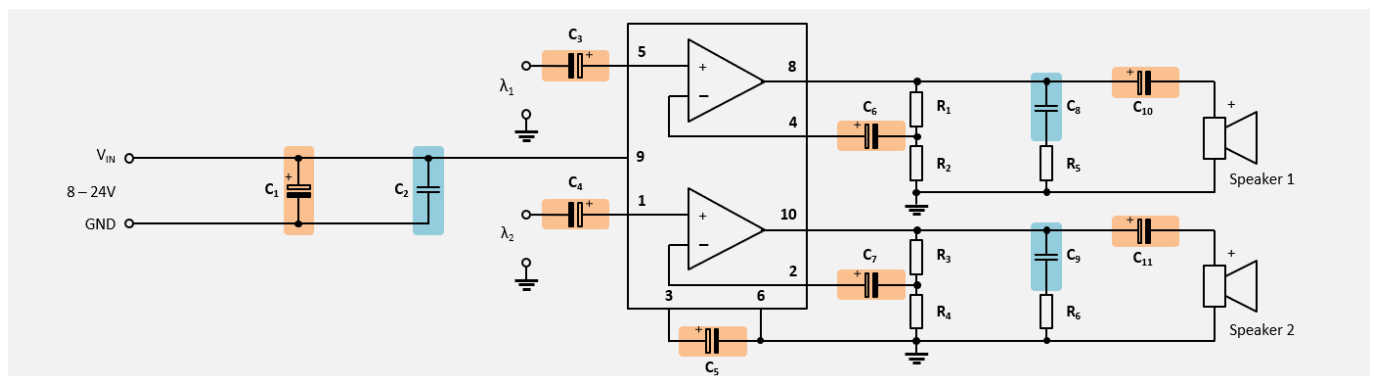

Example of a portable power adapter for USB-C laptops, smartphones and tablets with recommend products for the LC filter and to ensure stability (smoothing) during transient increase in the load voltage.

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub> , C <sub>2</sub>	LC filter	Input filtering	22μF; 400V; 105°C; Radial; 2000h D10xL25mm; 0.125A@120Hz	KM	KM220M400G250A
C <sub>1</sub> , C <sub>2</sub>	LC filter	Input filtering	15μF; 400V; 105°C; Radial; 5000h D10xL20mm; 0.24A@120Hz	KF	KF150M400G200A
C <sub>3</sub>	DC/DC converter	Output filtering	470μF; 16V; 105°C; Radial; 2000h D5.5xL11mm; 2.69A@100kHz	PX	PX471M016C090P
C <sub>3</sub>	DC/DC converter	Output filtering	330μF; 12V; 105°C; Radial; 2000h D5xL9mm; 2.69A@100kHz	PX	PX331M012C090P

## AUDIO SPEAKER

Example of an active audio speaker with treble and bass and the recommend products for the NF filter as well as the acoustic coupling.

Designation	Circuit	Purpose	Specification	Series	Part Number
C <sub>1</sub> , C <sub>3</sub> , C <sub>4</sub> , C <sub>5</sub> C <sub>6</sub> , C <sub>7</sub> , C <sub>10</sub> , C <sub>11</sub>	Audio speaker	NF filter	470μF; 35V; 85°C; Radial; 2000h D10xL16mm; 0.63A@120Hz	RW	RW471M035G160A
C <sub>2</sub> , C <sub>8</sub> , C <sub>9</sub>	Audio speaker	Acoustic coupling	47μF; 35V; 85°C; Radial; 2000h D10xL12.5mm; 0.15A@120Hz	NR	NR470M035G125ETA

**TECHNICAL TERMS**

Item	Description	SI units
$V_R$	Rated voltage	V
$V_S$	Surge voltage	V
$V_{Ripple\_AC}$	Ripple voltage	V
$V_{Reverse}$	Reverse voltage	V
$V_A$	Application voltage, operating voltage	A
$I_R$	Rated ripple current, rated alternating current	A
$I_A$	Application current, operating current	A
$I_{A\_Max}$	Maximum application current, maximum operating current	A
$I_{Leak}$	Leakage current	A
$T_{0\_Max}$	Upper category temperature	°C
$T_{0\_Min}$	Lower category temperature	°C
$T_A$	Application temperature, operating temperature	°C
$T_S$	Capacitor surface temperature	°C
$\Delta T_0$	Core temperature rise by internal heating due to rated ripple current	°C
$\Delta T_A$	Core temperature rise by internal heating due to application ripple current	°C
$C_R$	Rated capacitance	F
$\Delta C$	Capacitance tolerance	%
$C/C_R$	Capacitance drift	-
$\tan \delta$	Dissipation factor	-
$Z$	Impedance	$\Omega$
ESR	Equivalent series resistance	$\Omega$
ESL	Equivalent series inductance	H
$X_C$	Capacitive reactance	$\Omega$
$X_L$	Inductive reactance	$\Omega$
f	Frequency	Hz
$\omega$	Angular frequency	Hz
$\lambda$	FIT = failure in time	-
$K_f$	Multiplier for ripple current vs. frequency	-
$K_T$	Multiplier for ripple current vs. temperature	-
$K_0$	Dielectric constant derating coefficient at high temperature	-
$L_0$	Specified lifetime at max. capacitor temperature, rated voltage (and rated ripple current)	h
$L_A$	Expected lifetime at application conditions	h

OVERVIEW - SCREW TERMINAL ALUMINUM ELECTROLYTIC CAPACITORS

Features

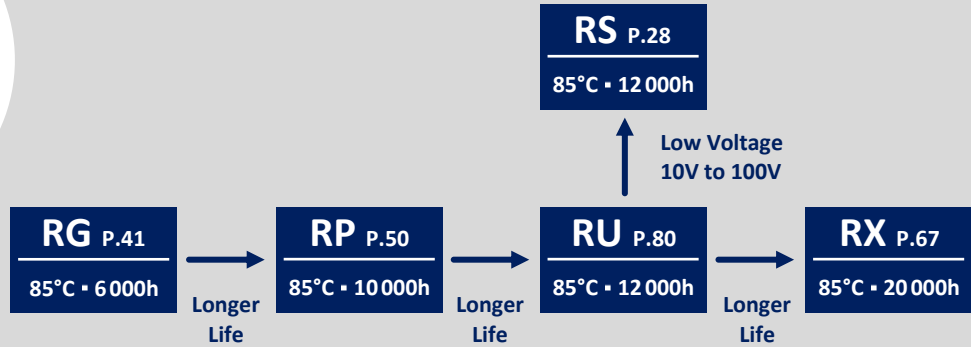

Series	Page	High Ripple Current	Long Life	Standard	Ultra Long Life	With Stud	Temperature Range (°C)		Voltage Range (V)		Capacitance Range (µF)		Endurance (hours)	Useful Life (hours)

**GROUP CHART • SCREW TERMINAL ALUMINUM ELECTROLYTIC CAPACITORS**

*85°C ■ 6000h to 20000h ■ Useful Life*

*105°C ■ 4000h to 10000h ■ Useful Life*

### RS SERIES ■ LONG LIFE 85°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ■ Screw terminal type
- Endurance: 85°C ■ 2000 hours, Useful life: 85°C ■ 12000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics	
Operating Temperature Range		-40 ~ +85°C	
Rated Voltage Range	$V_R$	10 ~ 100V DC	
Surge Voltage	$V_S$	$V_S = 1.15 \cdot V_R$	
Capacitance Range	$C_R$	1800 ~ 1000000 $\mu$ F	
Cap. Tolerance	$\Delta C$	$\pm 20\%$ (120Hz ■ 20°C)	
Leakage Current (20°C ■ $V_R$ applied)	$I_{LEAK}$	$\leq 0.018 \cdot (C_R \cdot V_R)^{0.85} + 4$ ( $\mu$ A) or 5mA (whichever is smaller) ■ After 5 minutes [ $I_{LEAK}$ ( $\mu$ A) ; $C_R$ ( $\mu$ F) ; $V_R$ (V) ]	
Dissipation Factor % (20°C ■ 120Hz)	$\tan \delta$	Not to exceed the values shown in standard ratings	
Low Temperature Characteristics at 120Hz	Z ratio max.	$V_R$ (V DC)	10 ~ 100
		Z-25°C/Z+20°C	3
		Z-40°C/Z+20°C	12

Lifetime Test			
Useful Life 85°C ( $V_R$ & $I_R$ applied)	Test	<b>12 000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 45\%$ of initial measured value	
	$\tan \delta$	$\leq 300\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ■ parts show higher drift as test criteria		
Endurance 85°C ( $V_R$ & $I_R$ applied)	Test	<b>2 000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 20\%$ of initial measured value	
	$\tan \delta$	$\leq 200\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
Shelf Life 85°C ( $V_R = 0$ )	Test	<b>1 000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 20\%$ of initial measured value	
	$\tan \delta$	$\leq 200\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
	Before measurement: Restore capacitor to 20°C, apply $V_R$ for 30 min according JIS-C-5101-4		
Vibration Resistance Test		Max. 10g force, $f_{RANGE}$ 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ■ IEC 60068-2-6	

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RS563M016P800E50
> 35	PVC	Thermo	Yes	No	-	RS334M025TA20E50
> 35	PET	Thermo	No	No	(*) Note	RS334M025TA20E50*
> 35	PET	Ink	No	Yes	(**) Note	RS334M025TA20E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

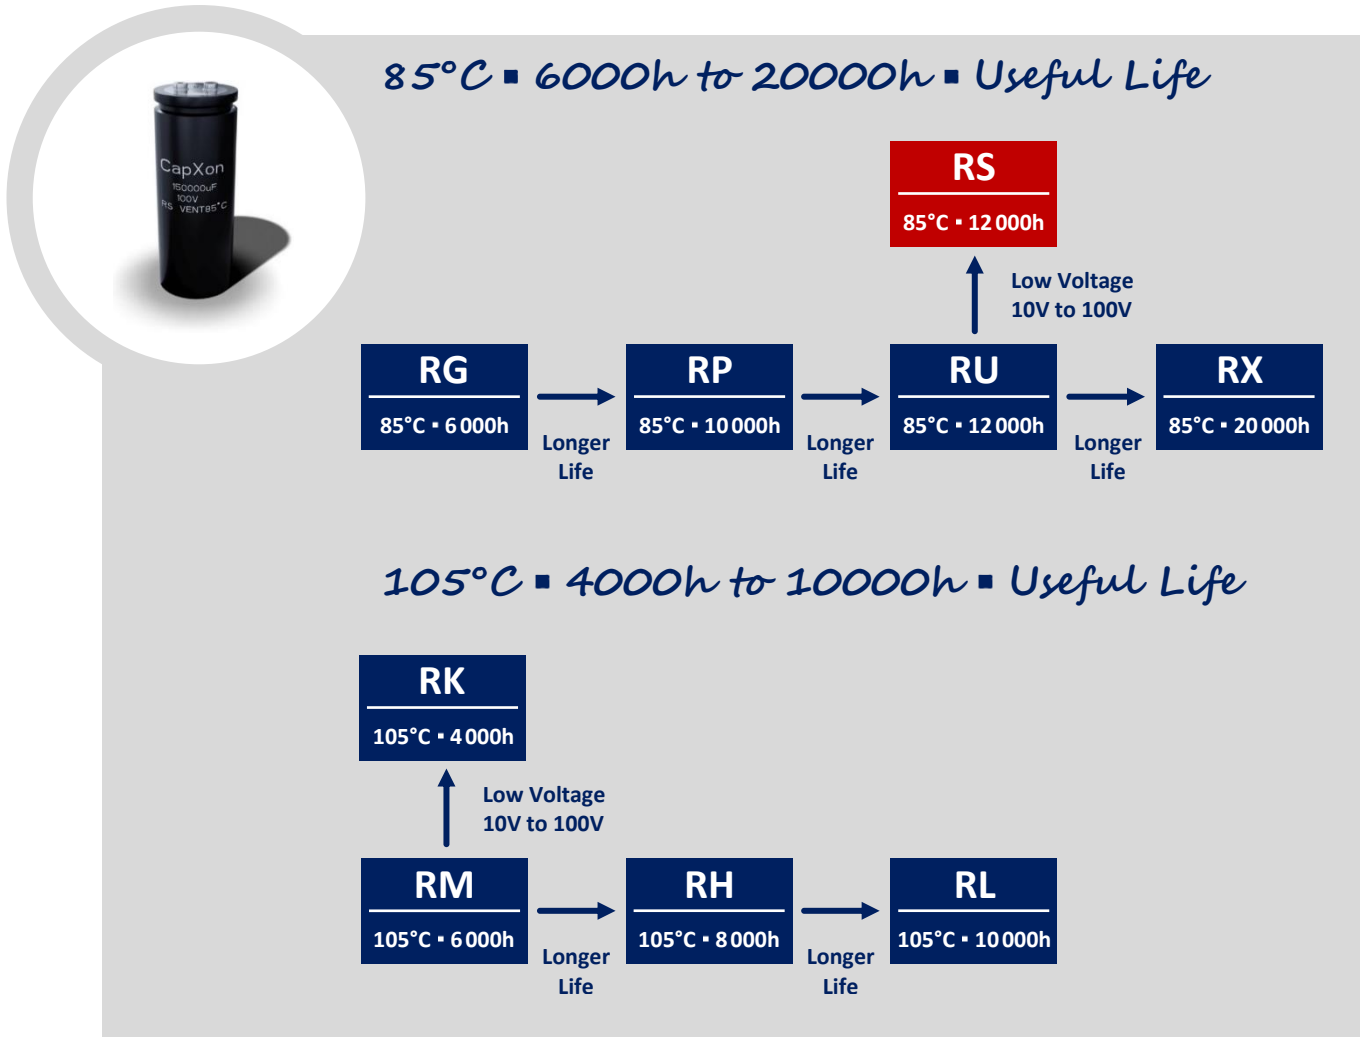

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RG SERIES ▪ STANDARD 85°C TYPE

#### Key FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ▪ Screw terminal type
- Endurance: 85°C ▪ 2 000 hours, Useful life: 85°C ▪ 6 000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics			
Operating Temperature Range		-40 ~ +85°C		-25 ~ +85°C	
Rated Voltage Range	V <sub>R</sub>	160 ~ 450V DC		500 ~ 630V DC	
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>		(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>	
Capacitance Range	C <sub>R</sub>	390 ~ 39000µF		1000 ~ 10000µF	
Cap. Tolerance	ΔC	±20% (120Hz ▪ 20°C)			
Leakage Current (20°C ▪ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (µA) or 5mA (whichever is smaller) ▪ After 5 minutes [ I <sub>LEAK</sub> (µA) ; C <sub>R</sub> (µF) ; V <sub>R</sub> (V) ]			
Dissipation Factor % (20°C ▪ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450	500 ~ 550	≥ 600
		tanδ	15	20	25
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450	≥ 500	
		Z-25°C/Z+20°C	4	4	
		Z-40°C/Z+20°C	10	-	

Lifetime Test			
Useful Life 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>6 000 hours</b>	
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value	
	tanδ	≤ 175% of initial specified value	
	I <sub>Leak</sub>	≤ the initial specified value	
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ▪ parts show higher drift as test criteria		
Endurance 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>2 000 hours</b>	
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value	
	tanδ	≤ 130% of initial specified value	
	I <sub>Leak</sub>	≤ the initial specified value	
Shelf Life 85°C (V <sub>R</sub> = 0)	Test	<b>1 000 hours</b>	
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value	
	tanδ	≤ 130% of initial specified value	
	I <sub>Leak</sub>	≤ the initial specified value	
	Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4		
Vibration Resistance Test	Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ▪ IEC 60068-2-6		

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

> 35	PET	Ink	No	Yes	(**) Note	RG103M200SA20E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

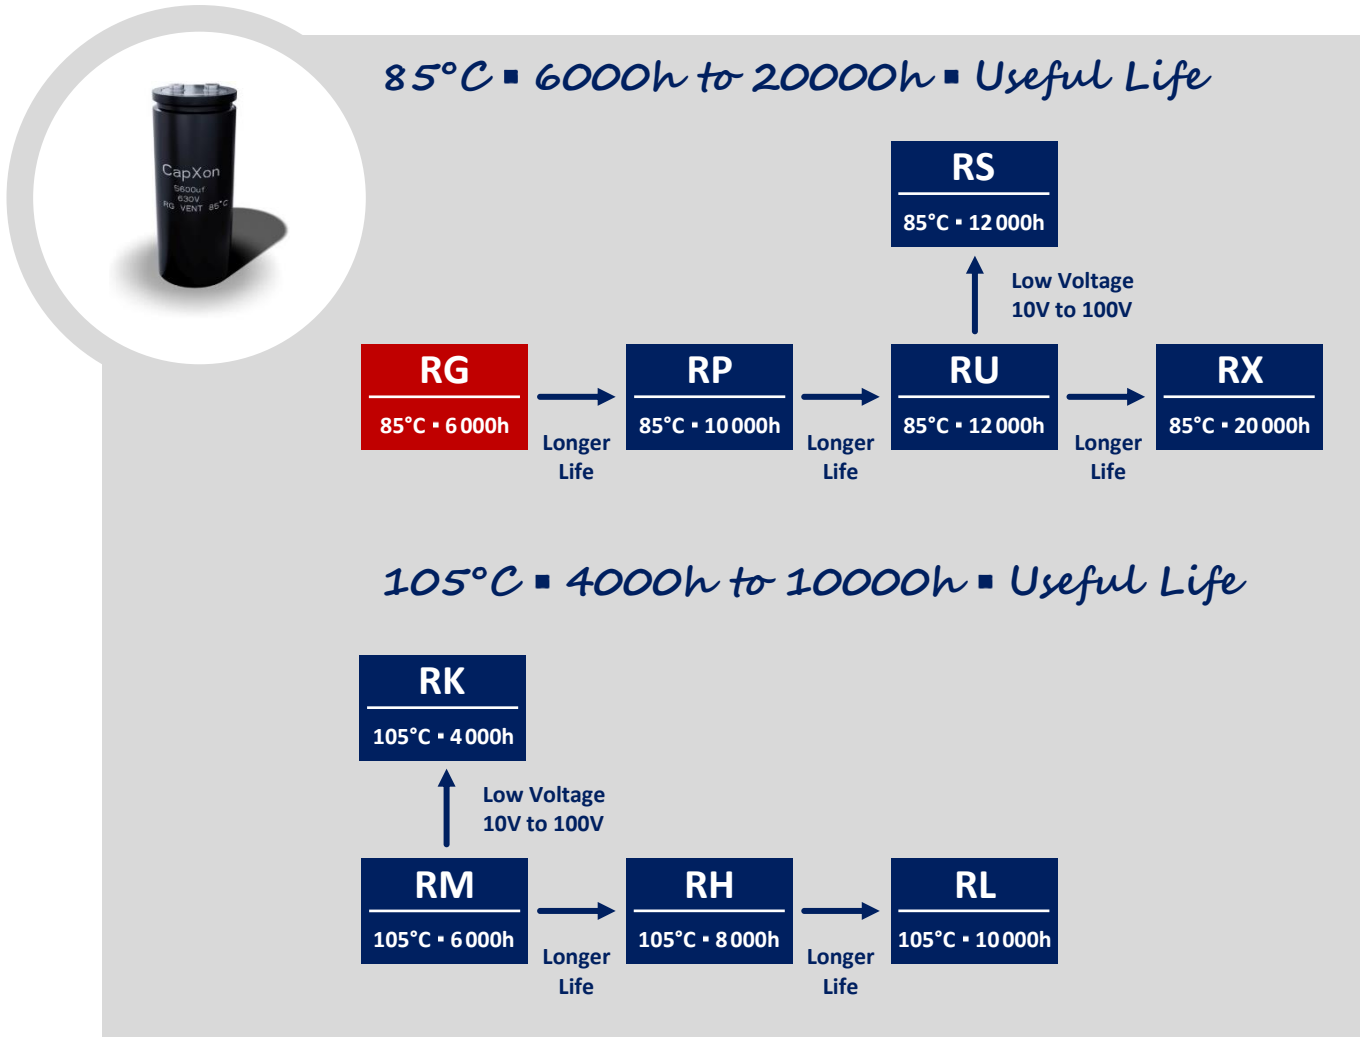

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RP SERIES ■ LONG LIFE 85°C TYPE

#### KEY FEATURES

- ALUMINUM ELECTROLYTIC CAPACITOR ■ Screw terminal type
- Endurance: 85°C ■ 2000 hours, Useful life: 85°C ■ 10000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics			
Operating Temperature Range		-40 ~ +85°C		-25 ~ +85°C	
Rated Voltage Range	V <sub>R</sub>	160 ~ 450V DC		500 ~ 630V DC	
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>		(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>	
Capacitance Range	C <sub>R</sub>	270 ~ 68000µF		100 ~ 10000µF	
Cap. Tolerance	ΔC	±20% (120Hz ■ 20°C)			
Leakage Current (20°C ■ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (µA) or 5mA (whichever is smaller) ■ After 5 minutes [ I <sub>LEAK</sub> (µA) ; C <sub>R</sub> (µF) ; V <sub>R</sub> (V) ]			
Dissipation Factor % (20°C ■ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450	≥ 500 ~ 550	≥ 600
		tanδ	15	20	25
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450	≥ 500	
		Z-25°C/Z+20°C	4	4	
		Z-40°C/Z+20°C	10	-	

Lifetime Test					
Useful Life 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>10000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value			
	tanδ	≤ 175% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ■ parts show higher drift as test criteria				
Endurance 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>2000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value			
	tanδ	≤ 130% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
Shelf Life 85°C (V <sub>R</sub> = 0)	Test	<b>1000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value			
	tanδ	≤ 130% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
	Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4				
Vibration Resistance Test	Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ■ IEC 60068-2-6				

★ Remark: For Halogen Free products see chapter SLEEVE AND PRINTING selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter $\varnothing D$ (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RP332M200PA20E50
> 35	PVC	Thermo	Yes	No	-	RP103M250TA40E50
> 35	PET	Thermo	No	No	(*) Note	RP103M250TA40E50*
> 35	PET	Ink	No	Yes	(**) Note	RP103M250TA40E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information "Accessories".

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	$\geq 3k$
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

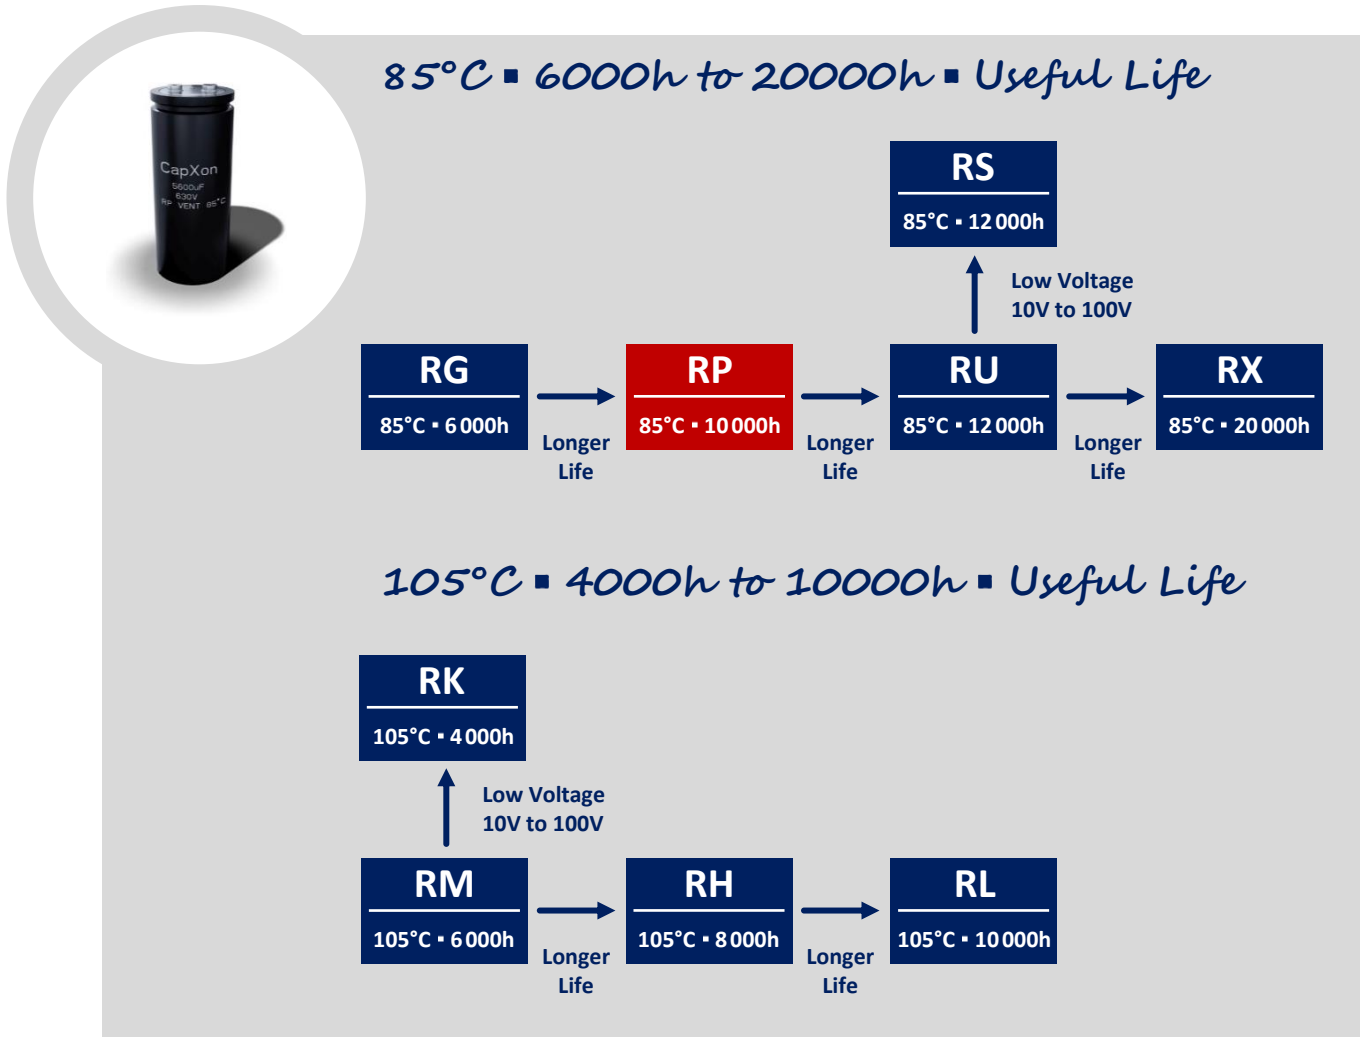

With:  $I_A$ : Actual application current

$I_R$ : Maximum permissible rated ripple current (A RMS)

$T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RX SERIES ■ ULTRA LONG LIFE 85°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ■ Screw terminal type
- Endurance: 85°C ■ 5000 hours, Useful life: 85°C ■ 20000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics			
Operating Temperature Range		-40 ~ +85°C		-25 ~ +85°C	
Rated Voltage Range	V <sub>R</sub>	160 ~ 450V DC		500 ~ 650V DC	
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>		(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>	
Capacitance Range	C <sub>R</sub>	220 ~ 100000μF		1000 ~ 15000μF	
Cap. Tolerance	ΔC	±20% (120Hz ■ 20°C)			
Leakage Current (20°C ■ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (μA) or 5mA (whichever is smaller) ■ After 5 minutes [ I <sub>LEAK</sub> (μA) ; C <sub>R</sub> (μF) ; V <sub>R</sub> (V) ]			
Dissipation Factor % (20°C ■ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450	500 ~ 550	≥ 600
		tanδ	15	20	25
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450	≥ 500	
		Z-25°C/Z+20°C	4	4	
		Z-40°C/Z+20°C	10	-	
<b>Lifetime Test</b>					
Useful Life 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>20 000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value			
	tanδ	≤ 175% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ■ parts show higher drift as test criteria				
Endurance 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>5 000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value			
	tanδ	≤ 150% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
Shelf Life 85°C (V <sub>R</sub> = 0)	Test	<b>1 000 hours</b>			
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value			
	tanδ	≤ 150% of initial specified value			
	I <sub>Leak</sub>	≤ the initial specified value			
	Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4				
<b>Vibration Resistance Test</b>		Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ■ IEC 60068-2-6			

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RX102M250P800E50
> 35	PVC	Thermo	Yes	No	-	RX272M400T750E50
> 35	PET	Thermo	No	No	(*) Note	RX272M400T750E50*
> 35	PET	Ink	No	Yes	(**) Note	RX272M400T750E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

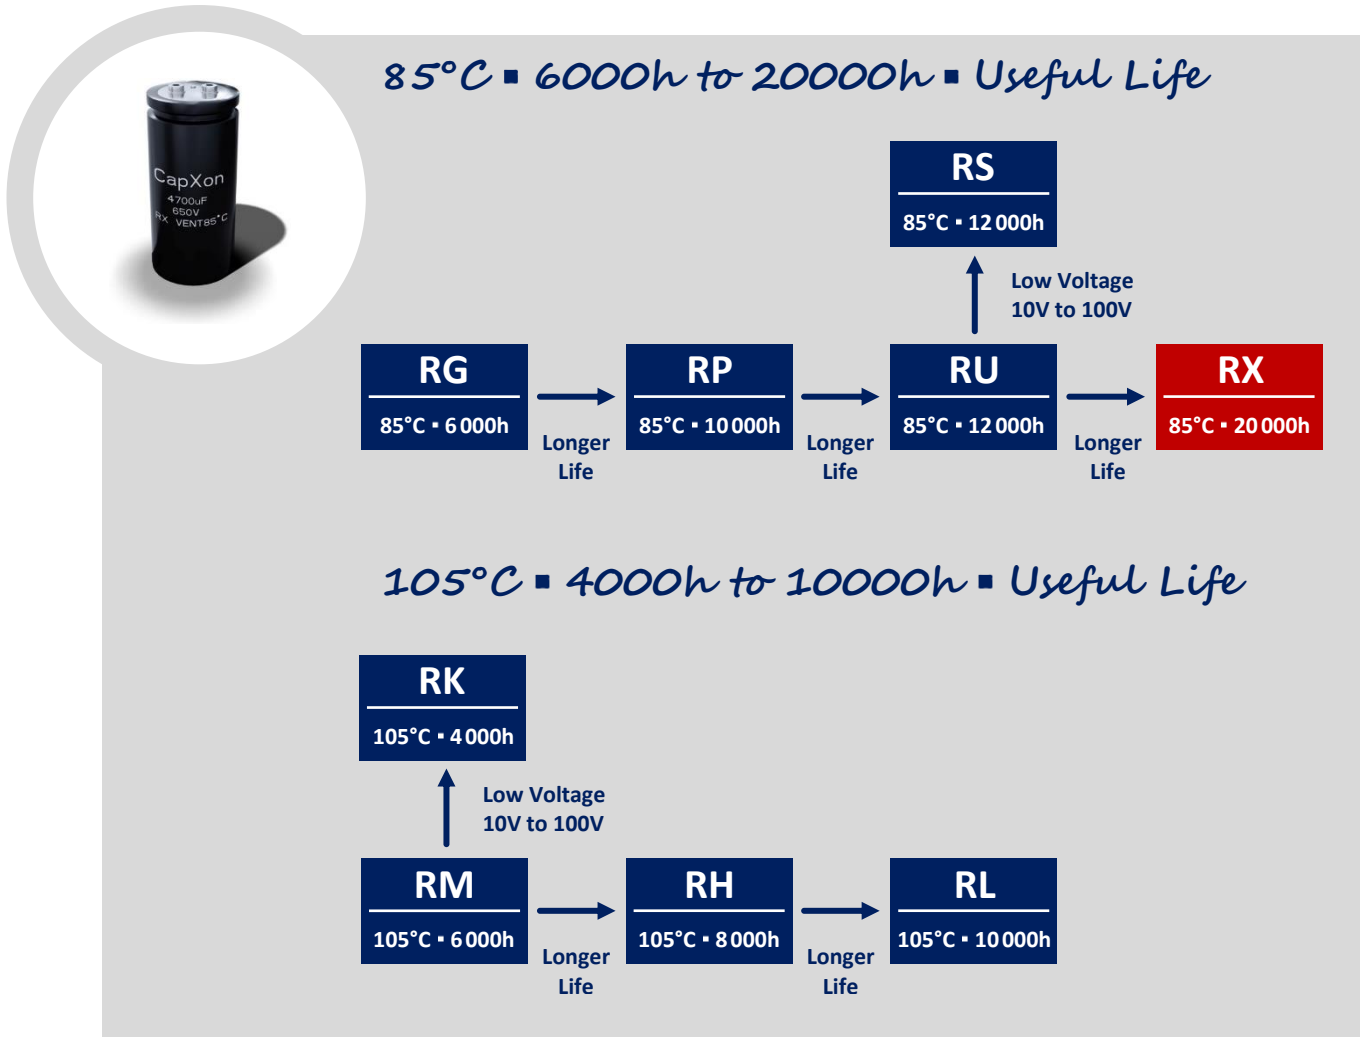

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

**DISCLAIMER**

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly

### RU SERIES ▪ LONG LIFE 85°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ▪ Screw terminal type
- Endurance: 85°C ▪ 2000 hours, Useful life: 85°C ▪ 12000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics	
Operating Temperature Range		-40 ~ +85°C	-25 ~ +85°C
Rated Voltage Range	V <sub>R</sub>	200 ~ 450V DC	500V DC
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>	(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>
Capacitance Range	C <sub>R</sub>	1000 ~ 33000μF	820 ~ 10000μF
Cap. Tolerance	ΔC	±20% (120Hz ▪ 20°C)	
Leakage Current (20°C ▪ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (μA) or 5mA (whichever is smaller) ▪ After 5 minutes [ I <sub>LEAK</sub> (μA) ; C <sub>R</sub> (μF) ; V <sub>R</sub> (V) ]	
Dissipation Factor % (20°C ▪ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450
		tanδ	15
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450
		Z-25°C/Z+20°C	4
		Z-40°C/Z+20°C	10

Lifetime Test	
Useful Life 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test <b>12 000 hours</b>
	ΔC/C <sub>R</sub> ≤ ±15% of initial measured value
	tanδ ≤ 175% of initial specified value
	I <sub>Leak</sub> ≤ the initial specified value
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ▪ parts show higher drift as test criteria
Endurance 85°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test <b>2 000 hours</b>
	ΔC/C <sub>R</sub> ≤ ±10% of initial measured value
	tanδ ≤ 130% of initial specified value
	I <sub>Leak</sub> ≤ the initial specified value
Shelf Life 85°C (V <sub>R</sub> = 0)	Test <b>1 000 hours</b>
	ΔC/C <sub>R</sub> ≤ ±10% of initial measured value
	tanδ ≤ 130% of initial specified value
	I <sub>Leak</sub> ≤ the initial specified value
	Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4
Vibration Resistance Test	Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ▪ IEC 60068-2-6

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

> 35	PET	Thermo	No	No	(*) Note	RU273M200TB20E50*
> 35	PET	Ink	No	Yes	(**) Note	RU273M200TB20E50**

Note: (\*) and (\*\*) consult CapXon for further details.

### ACCESSORIES

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information "Accessories".

### MULTIPLIER $K_f$ for RIPPLE CURRENT vs. FREQUENCY

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

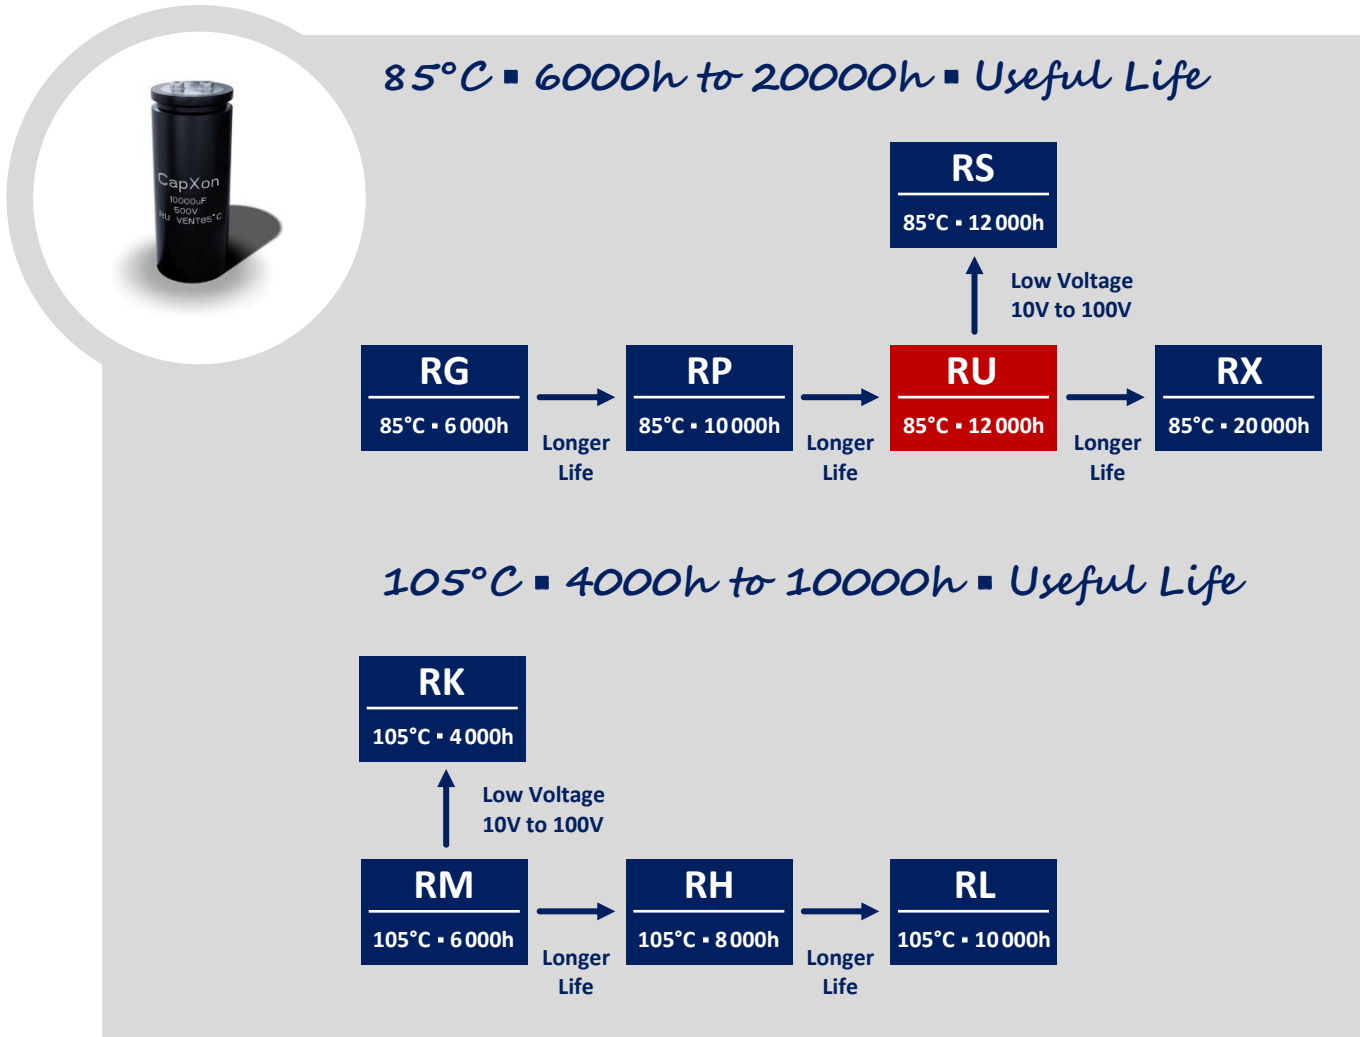

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RK SERIES ■ LONG LIFE 105°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ■ Screw terminal type
- Endurance: 105°C ■ 2000 hours, Useful life: 105°C ■ 4000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics	
Operating Temperature Range		-40 ~ +105°C	
Rated Voltage Range	$V_R$	10 ~ 100V DC	
Surge Voltage	$V_S$	$V_S = 1.15 \cdot V_R$	
Capacitance Range	$C_R$	1000 ~ 1000000μF	
Cap. Tolerance	$\Delta C$	±20% (120Hz ■ 20°C)	
Leakage Current (20°C ■ $V_R$ applied)	$I_{LEAK}$	$\leq 0.018 \cdot (C_R \cdot V_R)^{0.85} + 4$ (μA) or 5mA (whichever is smaller) ■ After 5 minutes [ $I_{LEAK}$ (μA) ; $C_R$ (μF) ; $V_R$ (V) ]	
Dissipation Factor % (20°C ■ 120Hz)	$\tan\delta$	Not to exceed the values shown in standard ratings	
Low Temperature Characteristics at 120Hz	Z ratio max.	$V_R$ (V DC)	10 ~ 100
		Z-25°C/Z+20°C	3
		Z-40°C/Z+20°C	12

Lifetime Test			
Useful Life 105°C ( $V_R$ & $I_R$ applied)	Test	<b>4000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 45\%$ of initial measured value	
	$\tan\delta$	$\leq 300\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ■ parts show higher drift as test criteria		
Endurance 105°C ( $V_R$ & $I_R$ applied)	Test	<b>2000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 20\%$ of initial measured value	
	$\tan\delta$	$\leq 200\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
Shelf Life 105°C ( $V_R = 0$ )	Test	<b>1000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 20\%$ of initial measured value	
	$\tan\delta$	$\leq 200\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
	Before measurement: Restore capacitor to 20°C, apply $V_R$ for 30 min according JIS-C-5101-4		
Vibration Resistance Test		Max. 10g force, $f_{RANGE}$ 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ■ IEC 60068-2-6	

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RK473M016P800E50
> 35	PVC	Thermo	Yes	No	-	RK154M025SA20E50
> 35	PET	Thermo	No	No	(*) Note	RK154M025SA20E50*
> 35	PET	Ink	No	Yes	(**) Note	RK154M025SA20E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information "Accessories".

**MULTIPLIER  $K_f$  FOR RIPPLE CURRENT VS. FREQUENCY**

$V_R$ (V)	ØD (mm)	Frequency (Hz)				
		50/60	100/120	1k	10k	≥ 50k
10 ~ 50	35 ~ 89	0.95	1	1.05	1.09	1.12
63 ~ 80	35	0.9	1	1.1	1.18	1.22
	50 ~ 89	0.95	1	1.05	1.09	1.12
100	35	0.8	1	1.22	1.3	1.33
	50	0.9	1	1.1	1.18	1.22
	63.5 ~ 89	0.95	1	1.05	1.09	1.12

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

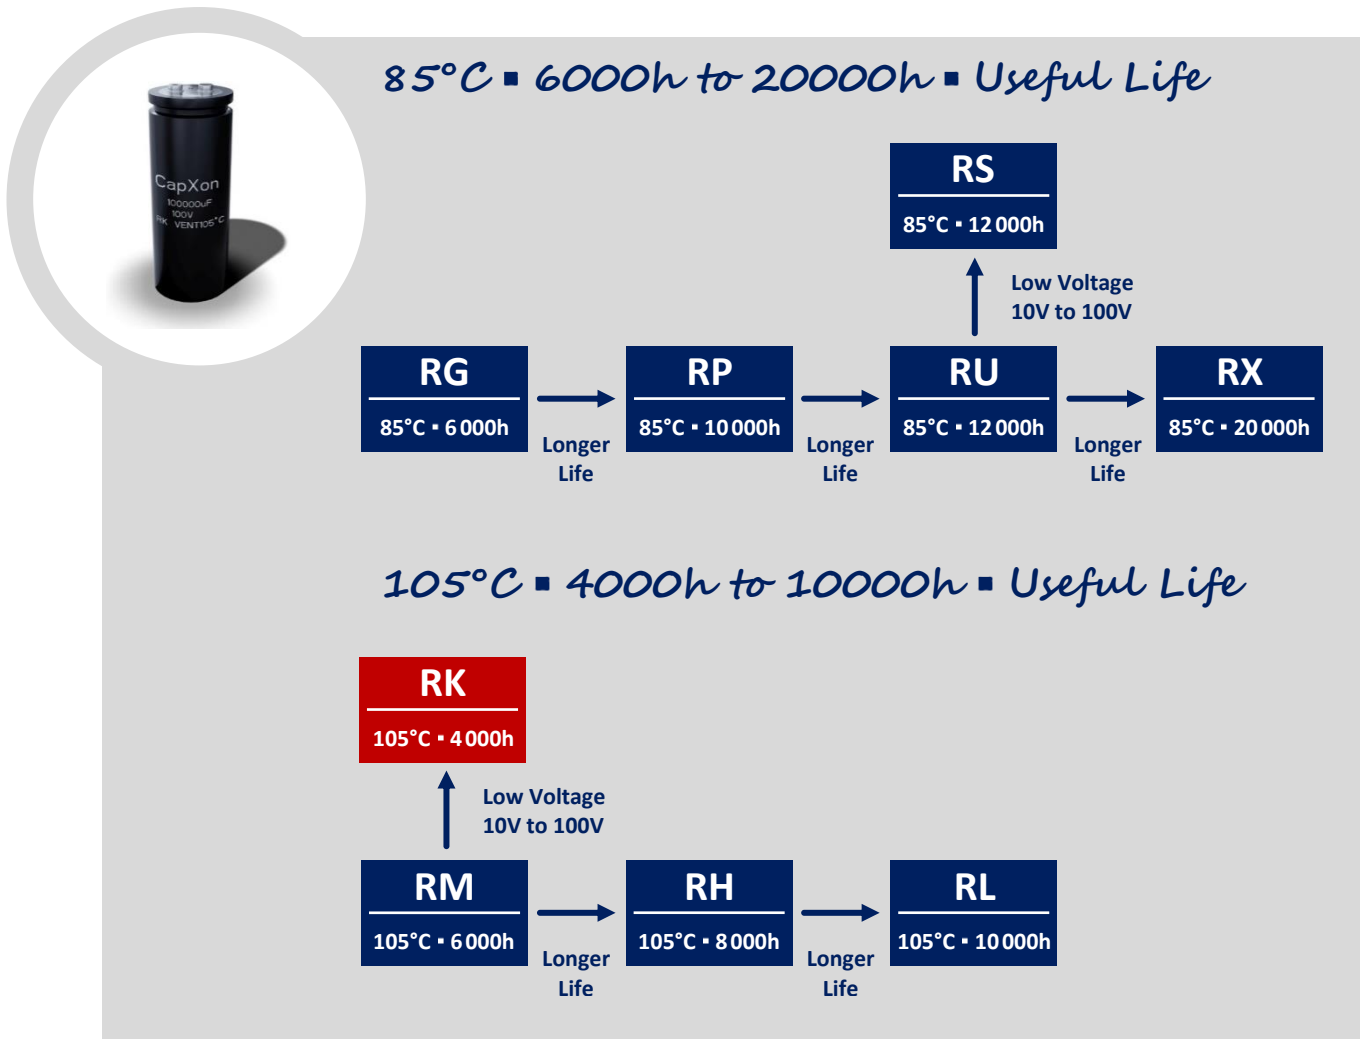

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RM SERIES ■ STANDARD 105°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ■ Screw terminal type
- Endurance: 105°C ■ 2000 hours, Useful life: 105°C ■ 6000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics		
Operating Temperature Range		-40 ~ +105°C		-25 ~ +105°C
Rated Voltage Range	V <sub>R</sub>	160 ~ 450V DC		500V DC
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>		(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>
Capacitance Range	C <sub>R</sub>	180 ~ 68000μF		330 ~ 10000μF
Cap. Tolerance	ΔC	±20% (120Hz ■ 20°C)		
Leakage Current (20°C ■ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (μA) or 5mA (whichever is smaller) ■ After 5 minutes [ I <sub>LEAK</sub> (μA) ; C <sub>R</sub> (μF) ; V <sub>R</sub> (V) ]		
Dissipation Factor % (20°C ■ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450	500
		tanδ	15	20
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450	500
		Z-25°C/Z+20°C	4	4
		Z-40°C/Z+20°C	10	-

Lifetime Test				
Useful Life 105°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>6000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value		
	tanδ	≤ 175% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ■ parts show higher drift as test criteria			
Endurance 105°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>2000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value		
	tanδ	≤ 130% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
Shelf Life 105°C (V <sub>R</sub> = 0)	Test	<b>1000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±10% of initial measured value		
	tanδ	≤ 130% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4				
Vibration Resistance Test	Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ■ IEC 60068-2-6			

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RM821M200P500E50
> 35	PVC	Thermo	Yes	No	-	RM472M350T960E50
> 35	PET	Thermo	No	No	(*) Note	RM472M350T960E50*
> 35	PET	Ink	No	Yes	(**) Note	RM472M350T960E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

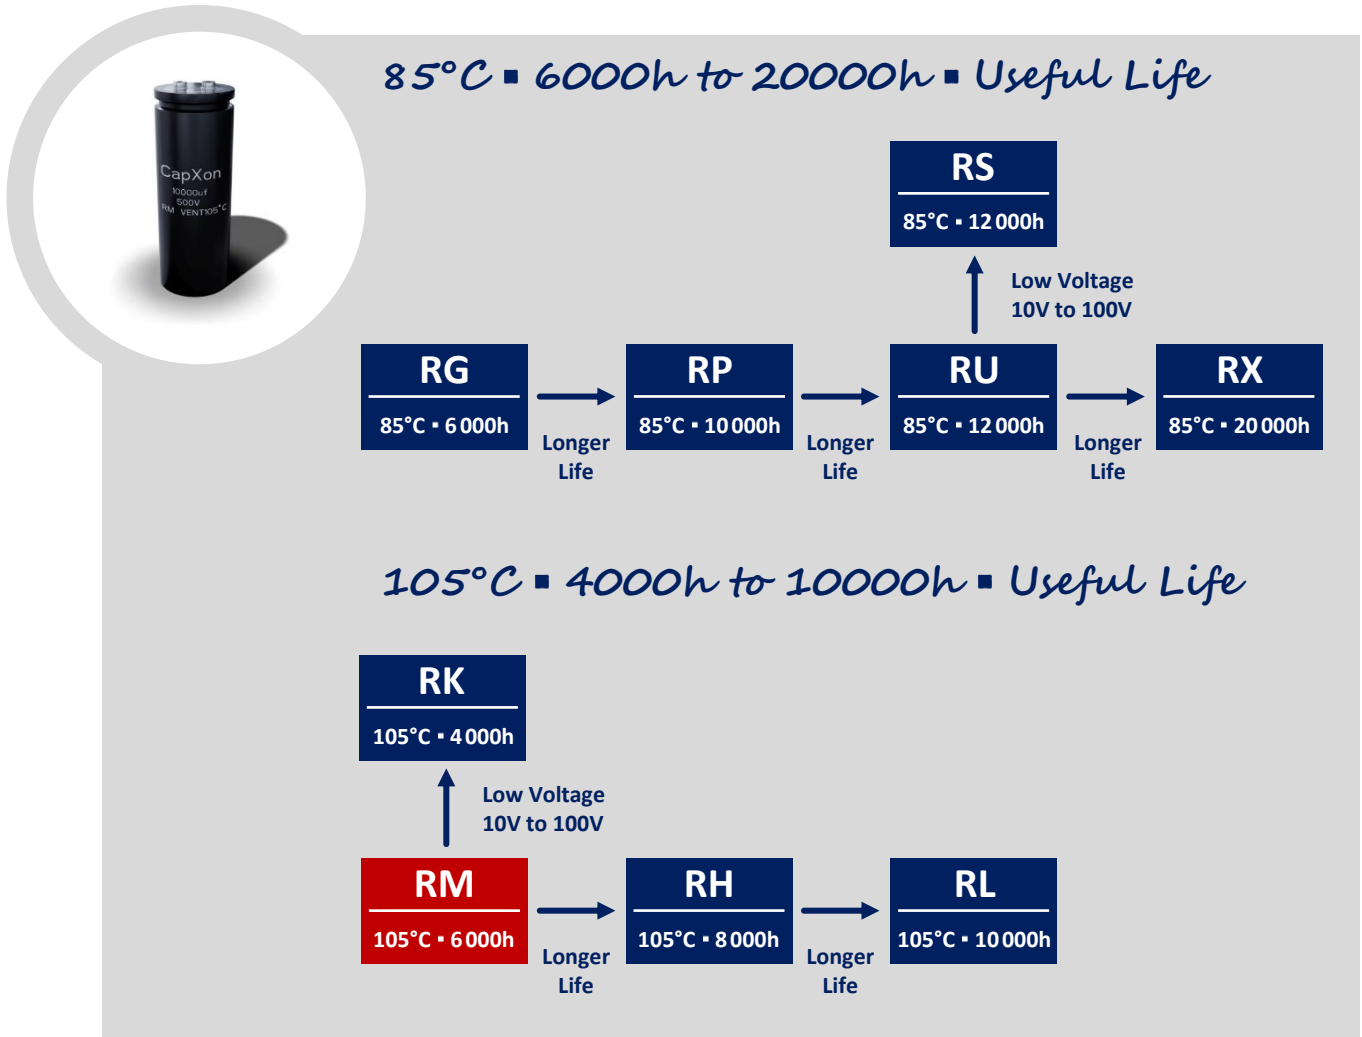

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RH SERIES ▪ LONG LIFE 105°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ▪ Screw terminal type
- Endurance: 105°C ▪ 2000 hours, Useful life: 105°C ▪ 8000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics	
Operating Temperature Range		-40 ~ +105°C	
Rated Voltage Range	$V_R$	160 ~ 450V DC	
Surge Voltage	$V_S$	$V_S = 1.10 \cdot V_R$	
Capacitance Range	$C_R$	220 ~ 47000μF	
Cap. Tolerance	$\Delta C$	±20% (120Hz ▪ 20°C)	
Leakage Current (20°C ▪ $V_R$ applied)	$I_{LEAK}$	$\leq 0.018 \cdot (C_R \cdot V_R)^{0.85} + 4$ (μA) or 5mA (whichever is smaller) ▪ After 5 minutes [ $I_{LEAK}$ (μA) ; $C_R$ (μF) ; $V_R$ (V) ]	
Dissipation Factor % (20°C ▪ 120Hz)	$\tan\delta$	$V_R$ (V DC)	160 ~ 450
		$\tan\delta$	15
Low Temperature Characteristics at 120Hz	Z ratio max.	$V_R$ (V DC)	160 ~ 450
		Z-25°C/Z+20°C	4
		Z-40°C/Z+20°C	10

Lifetime Test			
Useful Life 105°C ( $V_R$ & $I_R$ applied)	Test	<b>8000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 15\%$ of initial measured value	
	$\tan\delta$	$\leq 175\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ▪ parts show higher drift as test criteria		
Endurance 105°C ( $V_R$ & $I_R$ applied)	Test	<b>2000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 10\%$ of initial measured value	
	$\tan\delta$	$\leq 130\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
Shelf Life 105°C ( $V_R = 0$ )	Test	<b>1000 hours</b>	
	$\Delta C/C_R$	$\leq \pm 10\%$ of initial measured value	
	$\tan\delta$	$\leq 130\%$ of initial specified value	
	$I_{Leak}$	$\leq$ the initial specified value	
Before measurement: Restore capacitor to 20°C, apply $V_R$ for 30 min according JIS-C-5101-4			
Vibration Resistance Test	Max. 10g force, $f_{RANGE}$ 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ▪ IEC 60068-2-6		

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RH102M350PA20E50
> 35	PVC	Thermo	Yes	No	-	RH682M400TA60E50
> 35	PET	Thermo	No	No	(*) Note	RH682M400TA60E50*
> 35	PET	Ink	No	Yes	(**) Note	RH682M400TA60E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

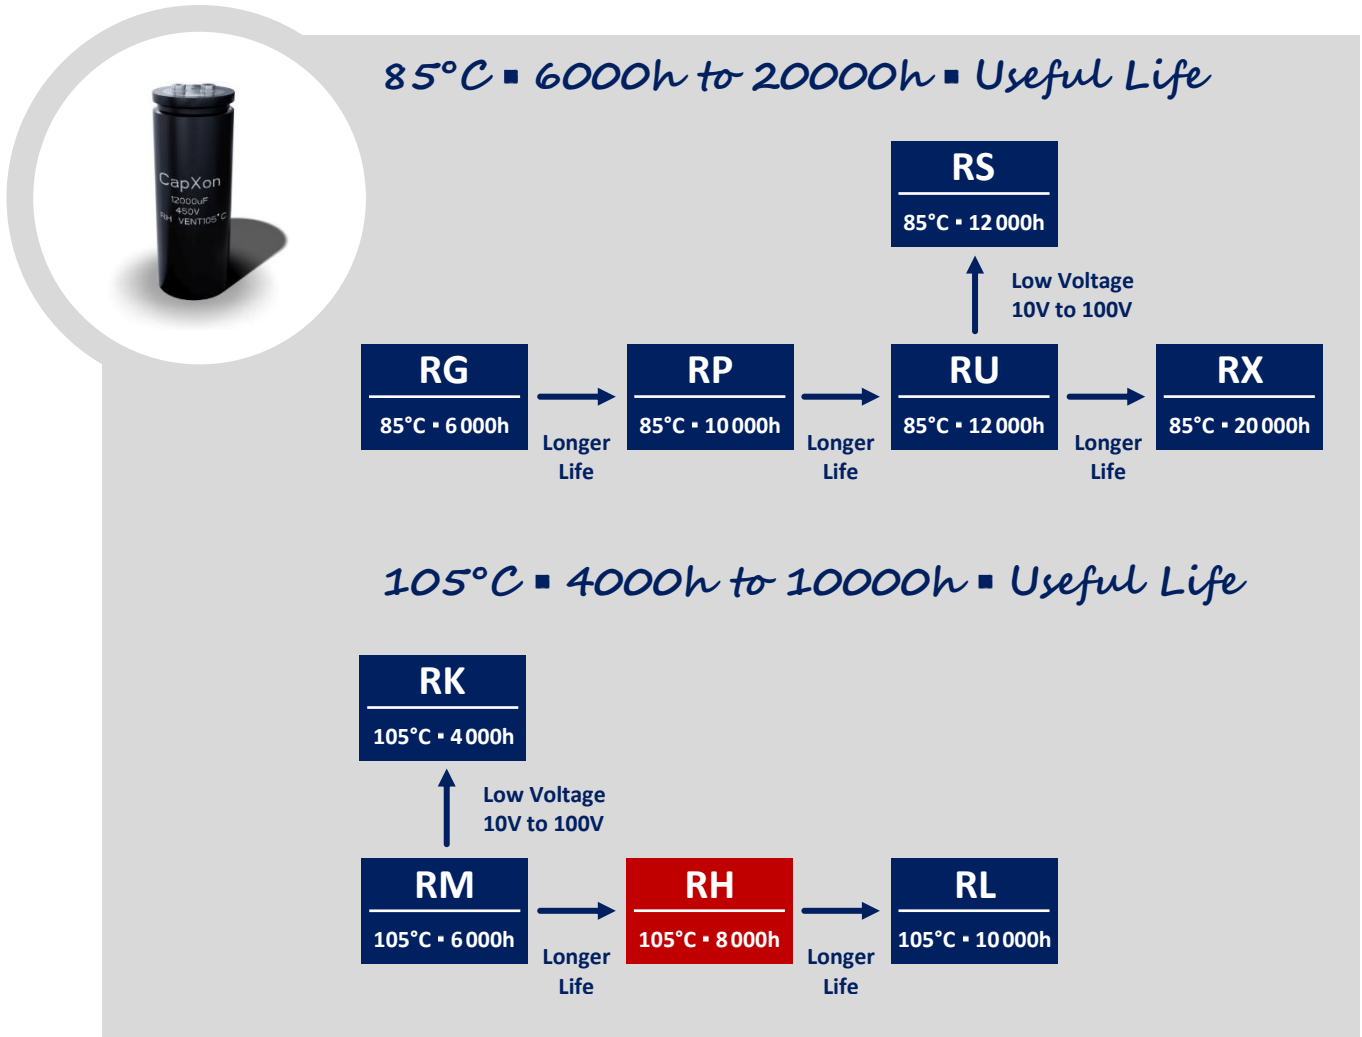

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### RL SERIES ▪ ULTRA LONG LIFE 105°C TYPE

#### KEY FEATURES

- **ALUMINUM ELECTROLYTIC CAPACITOR** ▪ Screw terminal type
- Endurance: 105°C ▪ 5 000 hours, Useful life: 105°C ▪ 10 000 hours
- Wide capacitance range
- All-welded construction ensures highest reliability
- Bottom cooling possible due to the thermal construction

#### SPECIFICATIONS

Items		Performance Characteristics		
Operating Temperature Range		-40 ~ +105°C		-25 ~ +105°C
Rated Voltage Range	V <sub>R</sub>	160 ~ 450V DC		500V DC
Surge Voltage	V <sub>S</sub>	(V <sub>R</sub> ≤ 315V): V <sub>S</sub> = 1.15·V <sub>R</sub>		(V <sub>R</sub> > 315V): V <sub>S</sub> = 1.10·V <sub>R</sub>
Capacitance Range	C <sub>R</sub>	220 ~ 22000µF		680 ~ 8200µF
Cap. Tolerance	ΔC	±20% (120Hz ▪ 20°C)		
Leakage Current (20°C ▪ V <sub>R</sub> applied)	I <sub>LEAK</sub>	≤ 0.018·(C <sub>R</sub> ·V <sub>R</sub> ) <sup>0.85</sup> + 4 (µA) or 5mA (whichever is smaller) ▪ After 5 minutes [ I <sub>LEAK</sub> (µA) ; C <sub>R</sub> (µF) ; V <sub>R</sub> (V) ]		
Dissipation Factor % (20°C ▪ 120Hz)	tanδ	V <sub>R</sub> (V DC)	160 ~ 450	500
		tanδ	15	20
Low Temperature Characteristics at 120Hz	Z ratio max.	V <sub>R</sub> (V DC)	160 ~ 450	500
		Z-25°C/Z+20°C	4	4
		Z-40°C/Z+20°C	10	-
<b>Lifetime Test</b>				
Useful Life 105°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>10 000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value		
	tanδ	≤ 175% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
	Deviation Rate at Useful Life: 100 FIT = 0.01%/1000h with 60% confidence level ▪ parts show higher drift as test criteria			
Endurance 105°C (V <sub>R</sub> & I <sub>R</sub> applied)	Test	<b>5 000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value		
	tanδ	≤ 175% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
Shelf Life 105°C (V <sub>R</sub> = 0)	Test	<b>1 000 hours</b>		
	ΔC/C <sub>R</sub>	≤ ±15% of initial measured value		
	tanδ	≤ 175% of initial specified value		
	I <sub>Leak</sub>	≤ the initial specified value		
	Before measurement: Restore capacitor to 20°C, apply V <sub>R</sub> for 30 min according JIS-C-5101-4			
<b>Vibration Resistance Test</b>		Max. 10g force, f <sub>RANGE</sub> 10Hz ... 55Hz, amplitude 0.75mm; X/Y/Z-axis each 2h; capacitor rigidly clamped by body to surface ▪ IEC 60068-2-6		

★ Remark: For **Halogen Free** products see chapter **SLEEVE AND PRINTING** selection.

**SLEEVE AND PRINTING SELECTION TABLE**

Diameter ØD (mm)	Sleeve Material	Sleeve Printing	CapXon Standard	Halogen Free	Product Code Suffix	Product Code Example
35	PET	Ink	Yes	Yes	-	RL331M250P500E50
> 35	PVC	Thermo	Yes	No	-	RL392M350TA00E50
> 35	PET	Thermo	No	No	(*) Note	RL392M350TA00E50*
> 35	PET	Ink	No	Yes	(**) Note	RL392M350TA00E50**

Note: (\*) and (\*\*) consult CapXon for further details.

**ACCESSORIES**

- The capacitors are supplied with suitable screws, serrated washers and plain washers. Accessories are not fastened to the capacitor.
- Suitable ring clamps and further assembly material see additional information “Accessories”.

**MULTIPLIER  $K_f$  for RIPPLE CURRENT vs. FREQUENCY**

Frequency (Hz)	50/60	100/120	300	1k	≥ 3k
$K_f$	0.8	1	1.2	1.3	1.4

**PRECAUTIONS, GUIDELINES AND PACKAGING INFORMATION**

Unless otherwise agreed in individual specifications, all products are subject to our “General Precautions and Guidelines” as well as our “Packaging Information”. Please refer to the following links in the table.

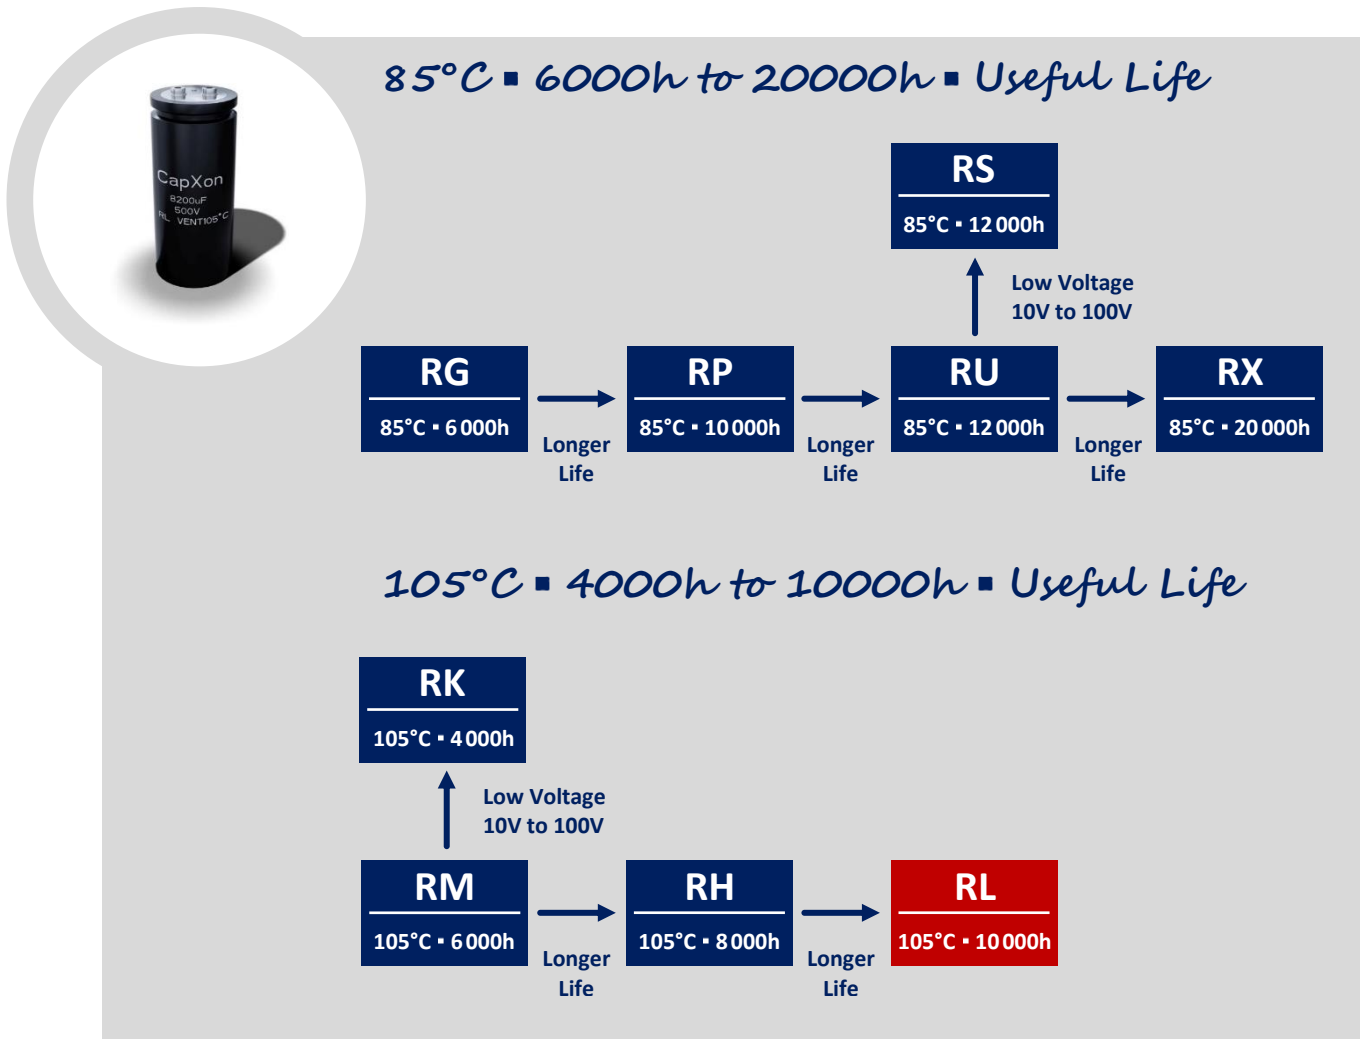

<a href="#">General Precautions &amp; Guidelines</a>	<a href="#">Packaging Information</a>	<a href="#">3D Models</a>	<a href="#">Reliability Tests</a>

**USEFUL LIFE**

With:  $I_A$ : Actual application current  
 $I_R$ : Maximum permissible rated ripple current (A RMS)  
 $T_A$ : Ambient temperature of the capacitor

### GROUP CHART

#### DISCLAIMER

All product related data (e.g. specification, statements and general information) are subject to change without any notice. It is necessary that the customer observes all product related technical / application information and handling instructions.

CapXon products are designed and manufactured according to severe quality and safety standards. Under no circumstance, CapXon warrants that any CapXon product is suitable for the purposes intended for your application, even CapXon knows the application. It is customer's duty and obligation to check and make sure that CapXon products are suitable for the purposes intended and select the correct and proper CapXon product. Customers are requested to perform a sufficient validation and reliability evaluation to assure needed safety level and reliability performance by suitable designs and to apply proper safeguards (e.g. redundancies, protective circuits).

Particular operating conditions (ambient temperature, ripple current, voltage, thermal resistance, etc.) as well as storage, production or assembly may affect the performance and the lifetime of the capacitor. Please consult CapXon for lifetime estimation, failure mode considerations or worst-case scenarios according to the product technology, product tolerances / deviations or change of the characteristics of the capacitor due to shipment, storage, handling, production and usage.

For aerospace or military application, life-saving, life-sustaining, safety critical applications or any application where failure may cause severe personal injury or death, please consult us before design-in the capacitor in your application.

Except for the written expressed warranties, CapXon does not impliedly, by assumption or whatever else, warrant, undertake, promise any other warranty or guaranty for any CapXon product.

For further information, please visit our website [www.capxongroup.com](http://www.capxongroup.com) or contact CapXon directly.

### MARKING - SCREW TERMINAL ALUMINUM ELECTROLYTIC CAPACITORS

#### Aluminum Electrolytic Capacitor - Screw terminal type - Sleeve with ink printing

CapXon: Manufacturer trademark  
 3300µF: Nominal capacitance  
 450V: Rated voltage  
 (-) polarity (Cathode indicate)  
 RP: Series  
 VENT: Safety vent  
 85°C: Maximum operating temperature  
 180927: Production datecode year/month/day (ex. 2018/September/27<sup>th</sup>)  
 Printing color: Gold

## 1. GENERAL PRECAUTIONS & GUIDELINES

In the following Precautions and Guidelines, CapXon provides instructions and requirements to assure a proper handling and desired performance of capacitors. Firstly, all general information is given, which applies to all technologies. The following chapters provides additional instructions specifically about technology and mounting style, which completes the full set of instructions.

### 1.1. GENERAL - ALL TYPES -

#### 1.1.1. POLARITY

All conventional Electrolytic Capacitors have a polarity due to the internal construction. This polarity is marked on the component by printing on the top of component or on the sleeve of Aluminum Electrolytic Capacitors, including Radial, Snap-In and Screw types.

Any reverse voltage can cause short circuit breakdown of capacitor or leakage of electrolyte. Electrolytic Capacitors isn't designed for AC-voltage supply and only meant for DC-voltage applications.

For an application where polarity in circuit can be reversed or unknown, specific bi-polar aluminium electrolytic capacitors shall be used. We offer such components within our product range.

#### 1.1.2. OVERVOLTAGE

Overvoltage can damage the capacitor and can cause a drastic increase in leakage current, which possibly shortens the lifetime of the capacitor. In a worst case, short circuit failure mode can happen. As a result, do not apply any continuous or temporary overvoltage.

The applied operating voltage, which is applied to the capacitor, should not exceed the rated voltage of the capacitor.

#### 1.1.3. OPERATING TEMPERATURE

Only operate the capacitor within the limits of allowed temperature range, which is specified by datasheet. Be aware that the sum of thermal stress by ambient condition plus electrical stress is the main driving factor for aging. As the thermal stress level gets higher, the expected capacitor lifetime would be lower.

A drop in applied temperature, ambient condition or cooling within application can enlarge the expected lifetime of

the capacitor. For details, please see further documentation of lifetime estimation.

#### 1.1.4. RIPPLE CURRENT

The applied ripple current shall not exceed the stated max. ripple current  $I_R$  on the datasheet at the specific frequency.

When capacitors are overstressed by ripple, it can generate massive heat inside the capacitor, which can result in deterioration, vent operation or capacitor breakage.

#### 1.1.5. CHARGE AND DISCHARGING

Frequent and quick charge / discharge generates heat inside the capacitor and can cause possible increase of leakage current, reduction of the expected lifetime, decrease of capacitance, vent operation or breakage.

For such applications please see design rules or consult our technical support for assistance.

#### 1.1.6. SOLDERING CONDITIONS

For recommended reflow solder profile, please see additional information at Section 2. Soldering Instructions.

Soldering by vapor phase for SMD types or any hand soldering are not recommended. No permission is released by CapXon side either. In case of such a usage, customer need to validate solder result and applied component stress within their own manufacturing process.

#### 1.1.7. MSL – MOISTURE SENSITIVE LEVEL (ONLY FOR SMD TYPES)

Our standard SMD components are rated according to JEDEC J-STD020 with MSL1. Construction of this part does not include hygroscopic critical materials and are not prone to delamination or popcorn effects. Only SMD MLPC types of the Solid Conductive Polymer components have MSL3. Moreover, only this type requires additional actions or specific handling in factory floor by customer such as handling or storing the goods after opening the package in accordance to JEDEC J-STD020.

#### 1.1.8. RESISTANCE TO CHEMICALS AND SOLVENTS FOR WASHING, GLUING, FILLING AND COATING

Due to the wide variety of suppliers and different chemical formulas of washing, gluing, filling and coating materials, the individually used material and appliance process need to be validated by customer itself. It is not possible to provide any global material usage approval from our side.

CapXon can provide additional information, including combination of chemicals which could be critical to the component behavior and can support measurements of component performance after appliance of washing, gluing, filling or coating materials. For specific support, please kindly contact our technical support for further advices.

### 1.1.9. CLEANING AND WASHING

Do not wash the assembled capacitors with the following cleaning agents:

- **Xylene**
  - can cause deterioration of the rubber seal material
- **Halogenated solvents**
  - can cause corrosion and electrical failure modes
- **Petroleum based solvents**
  - can cause degeneration of the rubber seal material
- **Alkali based solvents**
  - can cause corrosion and dissolving of aluminum can
- **Acetone**
  - component marking possibly dissolve

After finishing cleaning and washing, the below points need to be verified by customer:

Dry all solvents properly from PCB as well as capacitor surface sufficiently and apply air blower or air knife, with temperatures within the temperature range of the product specification, if needed.

Monitor pH value, conductivity, specific gravity and water content of cleaning solvents to be sure of possible contaminations and pollution. Contaminations can negatively affect the performance of the capacitor.

### 1.1.10. GLUING, FILLING OR COATING

It is not allowed to use any gluing (adhesives), filling or coating materials, which contains halogenated solvents. Halogen ions are critical, because they can diffuse or creep in the capacitor through rubber sealing and can possibly damage the internal capacitor element /structure result in serious failure modes for the capacitor.

Additionally, please pay attention to the following points:

- Make sure that the surface of capacitor and the area between component bottom / rubber sealant is dry and clean before appliance of gluing, filling or coating material. It is important to avoid any contamination with chemical residues (e.g. flux residues, cleaning).
- Please follow and meet the stated gluing, coating, filling, heating and curing instructions from manufacturer or supplier of such materials. Be aware of possi-

ble shrinkage of such materials. Verify that the hardening was properly done and that no solvents / agents do remain.

- There should be no excessive heat nor mechanical pressure /stress at any stages from the production on customer side. Be aware of the possible material shrinkage of used material. High material shrinkage which leads to damage on capacitor is not CapXon's responsibility.
- The used materials of gluing, coating or filling can possibly react with the marking of component and this can change optical appearance such as the appearance and legibility.
- If the rubber seal surface is fully covered by gluing, filling or coating material, it is no longer possible to have a natural diffusion of gas between the inside of the capacitor and the ambient. So, to avoid such situation, it's strongly recommended to block maximum 80% of the sealed section on the bottom side of the capacitor.

Please find the example below of how gluing could be applied on Radial and Snap-In types.

*Gluing reference example of a Snap-In capacitor*

### 1.1.11. OPERATION AND ENVIRONMENT

As long as the application is powered, in operation and cap is not discharged, the user is never permitted to touch the electric terminals of the capacitor directly or to bridge the terminals by hand or any other conductive liquid or solid material. Otherwise, a short circuit of terminals can happen and a hard discharge can damage capacitor / application as well as it can harm the operator.

Within operation, please avoid the following environmental conditions to assure proper capacitor operation:

- high vibration, shocks or mechanical stress. For tested and allowed conditions, please see available references or contact us for details
- avoid direct sunlight, ozone and any kind of radiation or ultraviolet rays
- corrosive or toxic gases (e.g. ammonium, chlorine)

and compounds, bromine and compounds, hydrogen sulfide, sulfuric acid)

- ambient with high amount of damp condensation, water or types of oil

### 1.1.12. MECHANICAL STRESS

Best possible, avoid mechanical stress for the capacitor and do not apply any excessive mechanical stress to the lead wire pins or terminal.

After mounting, do not lift nor carry the PCB assembly by just grabbing the capacitor to pick up the board.

### 1.1.13. STORAGE

In case of long-term storage without applying voltage to the capacitor, leakage current tends to increase.

By applying the rated voltage before usage, the dielectric layer of aluminium oxide and leakage current can be stabilized.

If the capacitor is for more than 12 months, it is recommended to apply the DC rated voltage  $V_R$  for 30 minutes through 1k $\Omega$  protective series resistor.

The storage conditions for storage on customer side should be monitored and controlled to a temperature of 5°C up to 35°C and less than 75% rel. humidity.

### 1.1.14. DISPOSAL

Please follow your local governmental and organizational restrictions for disposal and if needed, contact your local responsible for correct handling.

In case of incineration, punch holes in the aluminum can in advanced to avoid explosion of capacitor and then burn with at least 800°C, otherwise it can result toxic gas.

## 1.2. ALUMINUM ELECTROLYTIC & HYBRID CONDUCTIVE POLYMER CAPACITORS - ALL MOUNTING STYLES -

### 1.2.1. VENT & VENT OPERATION AT EMERGENCY

As a safety feature, most our regular electrolytic capacitors have a so-called vent, which is a pre-determined breaking point. In case of overstressed component, it can lead to internal gassing and due to this an internal overpressure will

result in vent operation. So, the vent will open to release such pressure and gas can become visible. If user detects vent operation or gassing out of the capacitor when operating, disconnect the application immediately from power supply to turn it off directly. If it can't be turned off, the capacitor or the conductive liquid / gas of electrolyte can result in short-circuits, which can dramatically damage the application.

Please notice to avoid being near with body or face above or in direction of capacitors vent when powered. When the running application is overstressed, gas leakage by vent is possible. By this gas with temperatures higher than 100°C can occur and can hurt human body and face. In such an event, if contact with skin, wash it immediately with plenty of water and soap. If contact with eyes, rinse immediately (e.g. eye shower) with plenty of water. If gas is inhaled, gargle right away with plenty of water. For all three cases, please consult a doctor for medical advices.

For proper operation of vent, consider space between the vent and covering surfaces (e.g. housing) as stated at the table below, it is strongly recommended for your mechanical construction / build-up of your product:

*Minimum distance to be observed for the safe operation of the capacitor*

Case diameter $\phi$	Clearance distance Cl
6.3mm to 16mm	Min. 2mm
18mm to 35mm	Min. 3mm
$\geq 40$ mm	Min. 5mm

*Recommended minimum clearance distance between topline capacitor and device case*

If such a space is not provided, the vent will not operate completely or even cannot open in case of overpressure.

Case sizes which are smaller than 6.3mm in diameter have no vent on top, for these no space need to be considered.

### 1.2.2. SLEEVE MATERIAL (NOT FOR SMD)

The standard sleeve material for the majority of our Radial, Snap-In and Screw mounting capacitors is PET and for some series PVC is used as sleeve material. When sleeve is exposed to xylene, toluene or similar and afterwards exposed to high heat, the sleeve may be cracked or damaged.

The sleeve is not used as insulating material or layer and does not insulate capacitor to surroundings. For needed insulation, further actions need to be considered by customer and please follow our recommended design rules.

Sleeves are applied for all Aluminum Electrolytic Capacitors with Radial, Snap-In or Screw mounting and if desired for further customized solutions.

## 1.3. ALUMINUM ELECTROLYTIC - RADIAL TYPE -

### 1.3.1. PIN CUTTING & BENDING

Please take absolute care when cutting or bending pins, that the pin is fixed mechanically in direction of rubber sealant. It is necessary that the mechanical force while cutting and bending, which results in pulling or pressing force on pin, does not stress the inner construction of capacitor element or to damage the rubber sealant. Excessive pulling or pressing force on the pin with missing fixation can result in damage of internal pin to capacitor element connection and also the sealing can be weakened. So, please take care to assure appropriate cutting and bending. Do not pre-damage the capacitors and shorten their lifetime performance by incorrect handling.

### 1.3.2. SOLDERING

For recommended wave solder profile, please see additional solder instruction at section 2.5.

Improper soldering conditions may shrink or break the sleeve. Additionally, excessive heat can damage the internal capacitor element as terminals and lead wires conduct heat into the capacitor.

## 1.4. ALUMINUM ELECTROLYTIC CAPACITORS - SCREW TYPE -

### 1.4.1. MAINTENANCE

A regular inspection is recommended when screw capacitors are used at industrial applications. Before inspection, make sure to turn off the power, discharge screw capacitors carefully and do not apply mechanical force or pressure to the terminal to avoid damage. Inspection items are as stated below:

- Check on outer damage, deformation and electrolyte leakage
- Check electrical performance: leakage current, capacitance, DF value and other product specifications. If there is any abnormality detected, make sure a capacitor replacement will be done and handled properly

### 1.4.2. MOUNTING & INSTALLATION

Make sure capacitors rated capacitance, rated voltage and polarity is according to spec before installation. Please confirm that capacitors and circuit board terminal pitch is consistent to each other before installation. It may cause stress to internal capacitor element through the terminal. If the pitch is different, mounting was done nevertheless and strong mechanical stress was applied. In such case, this can cause short-circuit and other failure modes. Machine automated force and lead torque strength must be controlled properly when mounting happens with automated machine.

### 1.4.3. MOUNTING DIRECTION OF SCREW TYPE CAPACITORS

To avoid screw capacitor breakage / explosion, it is not allowed to be mounted with the safety vent downwards to ground, because vent can't function properly when mounted with vent to bottom side and existing gas pressure cannot release properly. Recommended mounting method is shown as figure below, to avoid any safety vent downwards installation. So, capacitor should be mounted with screw terminals up as shown below:

*Recommended mounting direction*

### 1.4.4. HORIZONTAL MOUNTING

For horizontal mounting following mounting is strongly recommended. Anode terminal in upper position with safety vent in horizontal position as figure below on left side or safety vent in upper position with anode and cathode terminal in horizontal as figure below on right side.

*Recommended mounting position, also in accordance to EIAJ RCR-2367C*

It may not damage capacitors directly, but an electrolyte leakage may happen, if installed by other mounting method in horizontal direction.

## 1.5. SOLID CONDUCTIVE POLYMER CAPACITORS

### 1.5.1. APPLICATION RESTRICTIONS

The leakage current of Solid Conductive Polymer Capacitors may vary which depends on thermal stress.

Please don't use Solid Conductive Polymer Capacitors in the following types of applications / circuits:

- High-impedance circuits - which are meant to sustain voltages
- Coupling circuits

- Time constant circuits - in addition to the leakage current fluctuation, capacitance may also fluctuate, which depends on operational temperature and humidity. The fluctuation of the capacitance may cause problems, if it is used as a time constant capacitor, which is extremely sensitive to the fluctuation of the capacitance. So, do not use it as a time constant capacitor.
- Other circuits - which are significantly affected by leakage current. If you want to use 2 or more capacitors in a series connection, please contact us before usage.

### 1.5.2. SUDDEN CHARGE AND DISCHARGE

Do not use the capacitor in circuits when capacitor is repetitively charged and discharged rapidly. If repetitively and rapid charging and discharging stresses the capacitor, it can result in reduction of capacitance or may cause further damage due to internal heating. The usage of a protective circuit is recommended to ensure reliability, when rush currents exceeds 10 times of capacitors allowed max. ripple current  $I_R$ , but never more than max. 10A. When measuring the leakage current, a protective resistor (1 k $\Omega$ ) must be inserted to the circuit during the charge and discharge.
